Attachment : Summary\_S2\_Prop50ha\_20220411.xlsx;EDS\_Activity\_169.pdf;EDS\_Activity\_169.gif;image001.png;image002.png;

Good morning,

Please find the EDS Activity map attached as GIF and PDF for the fortnight: 11 April 2022.

The LGA summary for properties with areas greater than 50 hectares is also attached: Summary\_S2\_Prop50ha\_20220411.xlsx.

ASSESSMENT BATCH	All properties >= 50ha	Properties >= 50ha with "Assessable Vegetation"	Properties with assessable vegetation assessed in this batch	Properties with assessable vegetation and change detected in this batch	Properties with assessable vegetation assessed in this batch (%)	Properties with assessable vegetation and change detected in this batch (%)
13/09/2021	38,931	35,938	28,768	85	80	0.3
27/09/2021	38,931	35,938	34,958	49	97	0.1
11/10/2021	38,931	35,938	28,076	46	78	0.2

Good afternoon,

Please find the EDS Activity map attached as GIF and PDF for the fortnight: 28 March 2022.

The LGA summary for properties with areas greater than 50 hectares is also attached: Summary\_S2\_Prop50ha\_20220328.xlsx.

ASSESSMENT BATCH	All properties >= 50ha	Properties >= 50ha with "Assessable Vegetation"	Properties with assessable vegetation assessed in this batch	Properties with assessable vegetation and change detected in this batch	Properties with assessable vegetation assessed in this batch (%)	Properties with assessable vegetation and change detected in this batch (%)

Good afternoon,

Please find the EDS Activity map attached as GIF and PDF for the fortnight: 31 January 2022.

The LGA summary for properties with areas greater than 50 hectares is also attached: Summary\_S2\_Prop50ha\_20220131.xlsx.

ASSESSMENT BATCH	All properties >= 50ha	Properties >= 50ha with "Assessable Vegetation"	Properties with assessable vegetation assessed in this batch	Properties with assessable vegetation and change detected in this batch	Properties with assessable vegetation assessed in this batch (%)	Properties with assessable vegetation and change detected in this batch (%)

Good morning,

Please find the EDS Activity map attached as GIF and PDF for the fortnight: 9 May 2022.

The LGA summary for properties with areas greater than 50 hectares is also attached: Summary\_S2\_Prop50ha\_20220509.xlsx.

ASSESSMENT BATCH	All properties >= 50ha	Properties >= 50ha with "Assessable Vegetation"	Properties with assessable vegetation assessed in this batch	Properties with assessable vegetation and change detected in this batch	Properties with assessable vegetation assessed in this batch (%)	Properties with assessable vegetation and change detected in this batch (%)

Attachment : Summary\_S2\_Prop50ha\_20220620.xlsx;EDS\_Activity\_174.pdf;EDS\_Activity\_174.gif;image001.png;

Good morning,

Please find the EDS Activity map attached as GIF and PDF for the fortnight: 20 June 2022.

The LGA summary for properties with areas greater than 50 hectares is also attached: Summary\_S2\_Prop50ha\_20220620.xlsx.

ASSESSMENT BATCH	All properties >= 50ha	Properties >= 50ha with "Assessable Vegetation"	Properties with assessable vegetation assessed in this batch	Properties with assessable vegetation and change detected in this batch	Properties with assessable vegetation assessed in this batch (%)	Properties with assessable vegetation and change detected in this batch (%)

# Queensland showing EDS image count and scenes assessed in batch 174 (20/06/2022)

Date : 23/05/2022 12:37:34 PM

From : "Alyce Emhofer"

To : "Steven Jacoby" , "Lisa Cox" , "Hugo Le Mao" , "Sam Bonaventura" , "Tanya Bartlett" , "Julie Graham" , "Peter Lazzarini" , "Michelle Richards"

Cc : "SI IM Vegetation Data"

Subject : ED SI Statistics and Activity Map: 23 May 2022

Attachment : Summary\_S2\_Prop50ha\_20220523.xlsx;EDS\_Activity\_172.pdf;EDS\_Activity\_172.gif;image001.png;image002.png;

Good afternoon,

Please find the EDS Activity map attached as GIF and PDF for the fortnight: 23 May 2022.

The LGA summary for properties with areas greater than 50 hectares is also attached: Summary\_S2\_Prop50ha\_20220523.xlsx.

ASSESSMENT BATCH	All properties >= 50ha	Properties >= 50ha with "Assessable Vegetation"	Properties with assessable vegetation assessed in this batch	Properties with assessable vegetation and change detected in this batch	Properties with assessable vegetation assessed in this batch (%)	Properties with assessable vegetation and change detected in this batch (%)

# An Early Detection System for vegetation change in Queensland

---

System specifications v2.1

Remote Sensing Centre

June 2020, Version 2.1

Published on Resources Disclosure Log  
RTI Act 2009

# 1 Introduction

The Department of Environment and Science (DES) has been monitoring land cover change in Queensland for over 20 years using satellite imagery, field data and other ancillary data sources. The primary source of satellite imagery used by DES is the Landsat series of satellite missions, operated by the United States National Aeronautics and Space Administration (NASA) and the United States Geological Survey (USGS), and Sentinel imagery available from the European Space Agency's Copernicus program. DES's Remote Sensing Centre (RSC) has a well-developed, mostly automated processing system for download, storage, processing and analysis of Landsat and Sentinel satellite imagery based on high performance computing facilities at the Ecosciences Precinct, Brisbane. Recent advances in computing technology, as well as open data policies for the Landsat and Sentinel program has made it possible to consider the development of a system which has the objective of early detection of obvious vegetation clearing events, subject to available imagery and resources.

In 2015, Department of Resources (then Department of Natural Resources, Mines and Energy) requested the RSC develop an Early Detection System (EDS) to allow timely detection of recent and obvious vegetation clearing activity. RSC scoped, developed and tested a system based on existing DES image processing and analysis approaches to provide regular detection of vegetation clearing in priority areas of the state. These detections are used to inform compliance activity by Department of Resources under the Vegetation Management framework.

The EDS facilitates

- Proactive timely reporting of highly likely woody vegetation clearing within a few weeks occurrence.
- Workload management across the financial year through a staggered delivery approach enabling DNRM to prioritise compliance action in a timely manner.
- Innovative use of technology and a system scalable to respond to political changes, resource requirements and scientific improvement.

RSC in partnership with Department of Resources has successfully operated EDS since February 2016, based on automated analysis of Landsat imagery followed by a manual review by remote sensing scientists. Since October 2018, EDS has been adapted to monitor change observed in Sentinel-2 satellite imagery. Sentinel-2 provides a new source of satellite imagery for EDS. Compared with Landsat, Sentinel-2 imagery has increased spatial resolution (Sentinel-2 at 10m vs Landsat at 30m) and increased temporal resolution (Sentinel-2 every 5 days vs Landsat every 16 days), offering benefits to the system.

The improvements to EDS since moving to a Sentinel-2 based system includes:

- Simplifying image interpretation -
  - Due to the higher resolution of the data, remote sensing scientists will be able to review the automated detections more quickly. It may also be possible to detect smaller and less obvious clearing events.
  - Images at higher spatial resolution are also easier for non-experts to interpret. This will facilitate communication of compliance actions to land holders.
- Increasing the frequency of imagery -
  - Frequent localised scenes provide more opportunity for cloud-free images, maximising the quality of the input data used to detect clearing.
- Diversifying the imagery sources –

- In the unlikely event of satellite failure or limited access, Landsat data will continue to be available if necessary to enable continued EDS operation.
- Greater consistency across national borders –
  - A Sentinel-2 version of EDS is currently being trialled in NSW. This presents an opportunity to capitalise on shared learning and scientific capability across jurisdictions (this is possible due to the Joint Remote Sensing Research Program).

The EDS is complemented by the annual Statewide Landcover and Trees Study (SLATS) program, which provides a comprehensive coverage of woody vegetation change across Queensland.

This report outlines a system specification for the Sentinel-2 based EDS.

## 2 Definitions

The *Vegetation Management Act 1999* applies the following definition;

*clear*, for vegetation—

(a) means remove, cut down, ringbark, push over, poison or destroy in any way including by burning, flooding or draining; but

(b) does not include destroying standing vegetation by stock, or lopping a tree.

For the application of remote sensing to monitoring vegetation change, it is necessary to adapt this definition to account for only for those changes that can be reliably and rapidly assessed using Landsat satellite imagery (ie. viewed from above);

*vegetation clearing*—

(a) means woody vegetation removal, cutting, pushing or other destruction by obvious human intervention and which can be reliably and rapidly identified using Landsat satellite imagery; and,

(b) may be lawful or unlawful

Where;

*woody vegetation*—

(a) means vegetation that has a foliage projective cover of approximately 11% or greater (equivalent to approximately 20% crown cover).

For the EDS, it is expected that rapid assessment of woody vegetation change will likely be limited to those areas of higher density of woody vegetation.

## 3 System specifications

Figure 1 provides a schematic overview of the EDS. The system is a series of automated and manual processing steps implemented within a high performance and desktop computing environment.

### 3.1 Operating environment

- The EDS will use the high performance computing environment (HPC) at Ecosciences Precinct to manage downloading and processing of satellite imagery.
- Satellite imagery is stored in a managed archive linked with a PostgreSQL/PostGIS database system for cataloguing and spatial querying.
- In general, over all of Queensland, this generates in excess of 10 terabytes per year of satellite imagery, and associated image products.
- EDS is able to make use of this existing HPC processing and storage infrastructure.
- ArcGIS or QGIS is used for manual checking of polygons.

### 3.2 Imagery and data

- EDS currently uses Sentinel-2 Multispectral Instrument (MSI) satellite imagery only. Sentinel-2 MSI information:
  - Two Sentinel-2 satellites traverse Queensland on a diagonal path capturing overlapping 100 km x 100 km image tiles of the land surface. There are 237 Sentinel-2 tiles being monitored by EDS.
  - Subsequent satellite overpasses are not necessarily adjacent to the previous overpass path; however every part of Queensland's land surface is revisited every 5 days with the two Sentinel-2 satellites. Some tiles lie in overlap areas between paths, with the path width at approximately 290km), so these are able to be revisited more often.
  - The spatial resolution of Sentinel-2 is approximately 10 metres.
  - Following overpass of a ground location in Queensland, Sentinel-2 image is generally available for download from the European Space Agency's Copernicus Hub in approximately 1-2 days. There are sometimes lags between image acquisition and image availability.
  - RSC applies its own radiometric and atmospheric corrections and cloud, cloud shadow, topographic shadow and water masks to Sentinel-2 imagery to enable accurate comparison of the imagery over time (refer to Section 3.3).
- EDS is based on a two-date woody change detection approach comprising a Sentinel-2 image with a fixed start date and the most recent Sentinel-2 image as the end date:
  - The start date Sentinel-2 image is a cloud-free, dry season image.
  - The end date Sentinel-2 image is the most recent image that has less than 20% cloud cover. Images with greater than 20% cloud are not processed or assessed for the EDS.

Image that contain more than 40% of image content are passed into EDS for processing.

- Regulatory and area-based filters are applied to the detected vegetation changes. Data used for filtering will be accessed from Department of Resources's Spatial Information Resource (SIR) and includes:
  - i. The Regulated Vegetation Management Map
  - ii. The Regional Ecosystem mapping data
  - iii. Grassland Regional Ecosystems
  - iv. Estates

RTI Act 2009

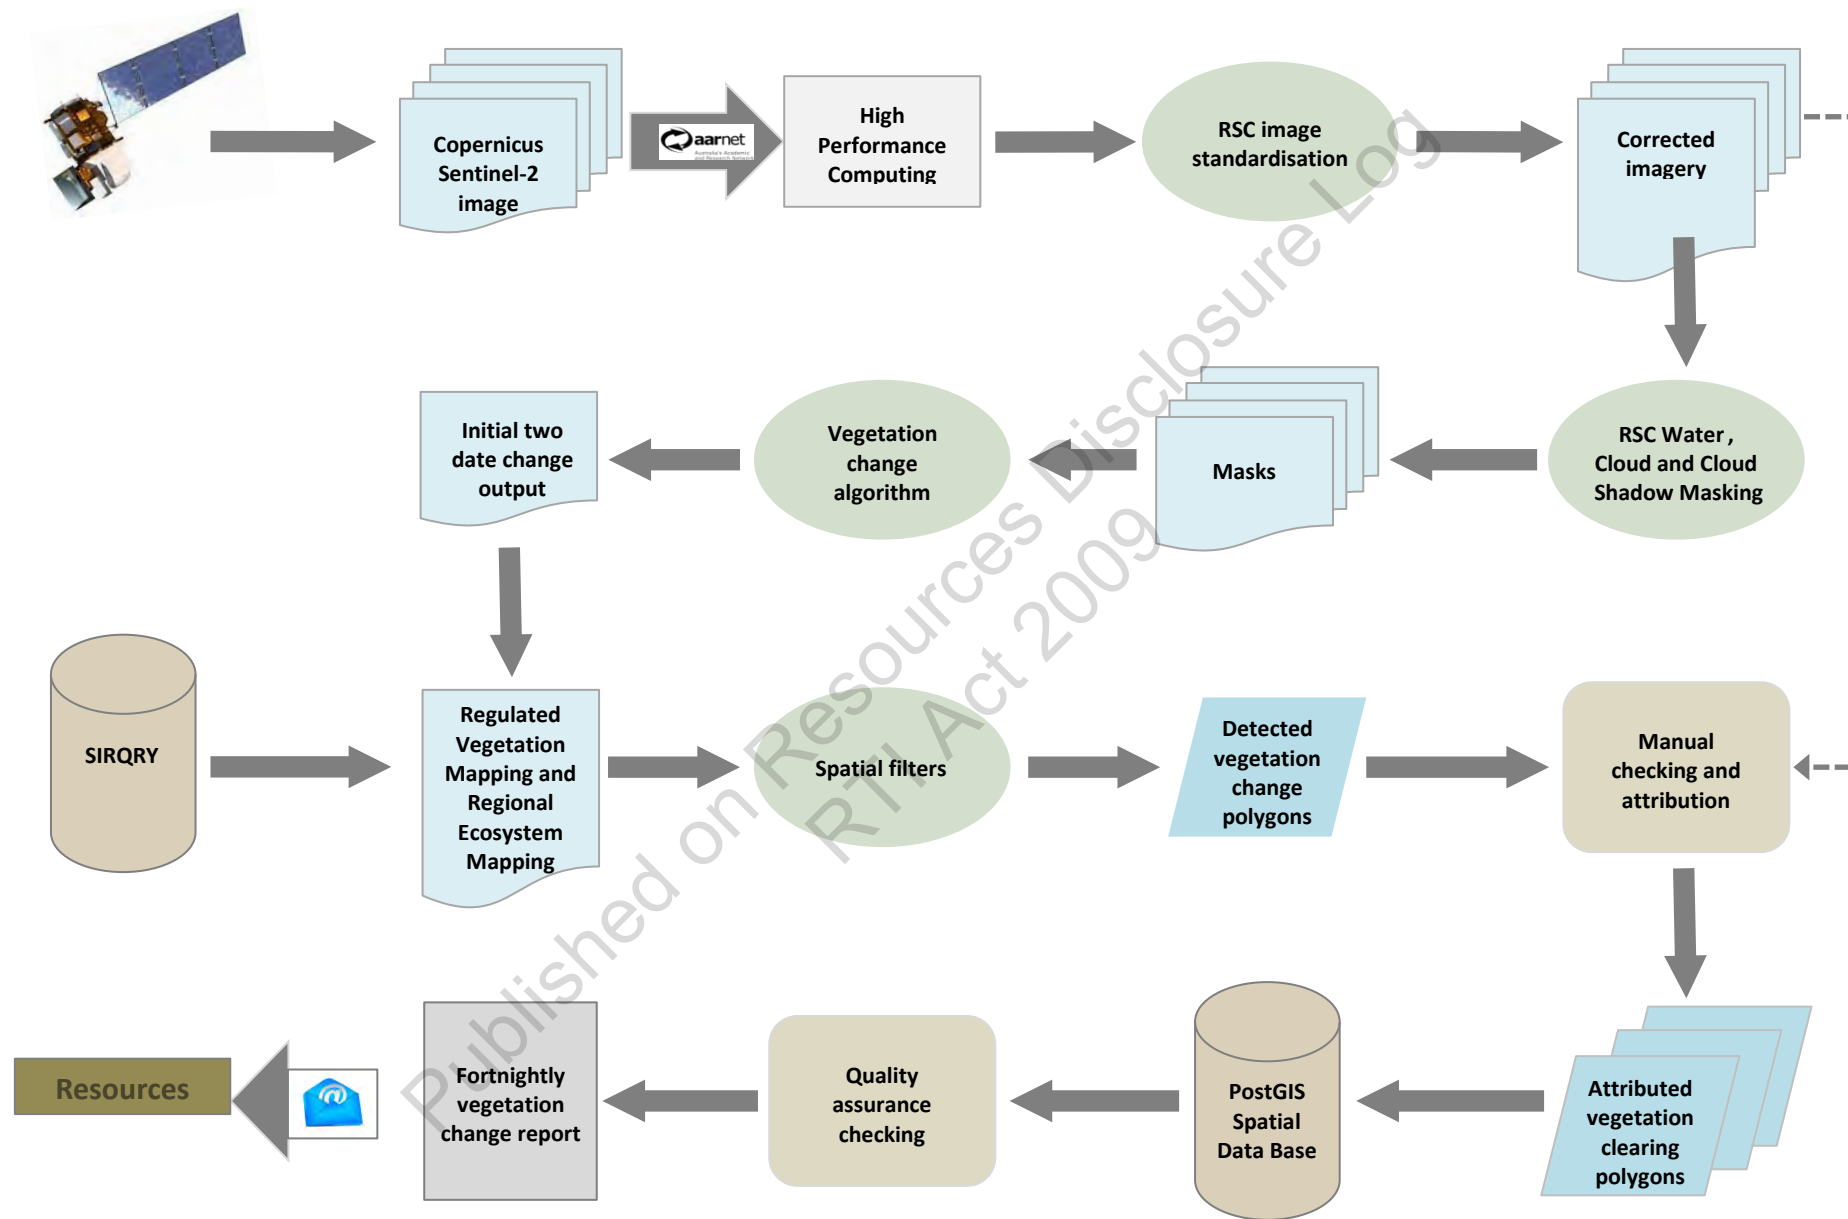

Figure 1 Schematic overview of the EDS

### 3.3 Automated processing

- All automated processing is implemented in the HPC environment at Ecosciences Precinct.
- All processes are implemented using scripted programs to ensure consistency and repeatability.
- All processes are documented using a wiki-based system.
- Processes implemented in EDS are based on published methods as follows:
  - Image pre-processing follows Danaher *et al.* (2001) and USGS (<http://earthexplorer.usgs.gov/>)
  - Water masking follows Danaher and Collett (2006)
  - Cloud and cloud shadow masking follows Zhu and Woodcock (2012)
  - The woody vegetation change algorithm follows Scarth *et al.* (2008)
- The automated process is summarised as follows:
  - Sentinel-2 satellite imagery is downloaded daily.
  - Image pre-processing routines are applied to standardise and correct the imagery, and to apply cloud, cloud shadow and water masks.
  - Images from the archive which are less than 20% cloud and contain more than 40% of image content are passed into EDS for processing.
  - Image date pairs are selected and the woody vegetation change algorithm is applied to produce a raster vegetation change image. All detected changes are included and coded with a probability of being a vegetation clearing event from 34 (low probability) to 39 (high probability).
  - A filter is applied to remove vegetation change detections which have a lower probability of being vegetation clearing (codes 34 to 37). Note that a previous analysis undertaken by RSC shows that this removes as much as 40% of vegetation clearing but also significantly reduces false positives. This means that only detections with a high probability of change is considered with codes 38 and 39.
  - A mask is applied using the Regulated Vegetation Management Map to remove detections in Category X areas.
  - Tenure which is outside the Vegetation Management Act is masked, as outlined in Section 7 of the VMA.
  - Grassland Regional Ecosystems, as prescribed in Schedule 5 of the Vegetation Management Regulation, are masked where the grassland is mapped as 100% of the heterogeneous RE polygons.
  - The vegetation change raster is converted to vector (polygon/shapefile). This joins contiguous change pixels to form polygons of detected vegetation change.

- A filter is passed over the polygons to remove internal holes to generate spatially-cohesive vegetation change polygons.
- Area threshold filters are applied to remove vegetation change polygons below the specified threshold. These thresholds are based on a combination of vegetation status and location in the state (i.e. Coastal or Inland), as shown in Table 1.
- Where new vegetation change detections overlap a previous, confirmed vegetation clearing detection by more than 50% of its area, the polygon will be removed. This rule ensures the same vegetation clearing event is not reported multiple times.
- Vegetation change polygons are sorted by area and stored in a spatial database. Each polygon is attributed with the date of detection (based on the Sentinel-2 acquisition date).

**Table 1 Area thresholds applied in automated processing steps of the EDS**

Vegetation Status*	Coastal Sentinel-2 tiles	Inland Sentinel-2 tiles
Least concern	sch3(1) or greater	sch3(1) or greater
Of concern	sch3(1) or greater	sch3(1) or greater
Endangered	sch3(1) or greater	sch3(1) or greater

\* Polygons are assigned the highest vegetation status associated with the regional ecosystems with which they intersect, regardless of percentage composition of heterogeneous regional ecosystem polygons.

\*\*Refer to Figure 2 for a map of Coastal catchment Landsat tiles.

### 3.4 Manual assessment of vegetation change

- Manual checking and attribution of vegetation change polygons is undertaken by an experienced analyst, using the two dates of imagery (i.e. start and end date) and the polygon shapefile of the vegetation change for the given change period in ArcGIS.
- Polygons are assessed/checked to the specified threshold size as listed in Table 1.
- Polygons are rapidly assessed against the two dates of imagery to identify the most obvious, readily detectable vegetation change events which can be attributed to vegetation clearing.
- Polygons are attributed as either “*Confirmed*” or “*Uncertain*” after interpretation of the two dates of imagery with some limited checking of ancillary data (e.g. higher resolution imagery).
  - “*Confirmed*” means the operator has a very high degree of certainty that the vegetation change detected is due to vegetation clearing.
  - “*Uncertain*” means the operator has less than a very high degree of certainty that the vegetation change detected is due to vegetation clearing. Note that polygons attributed as “*Uncertain*”, it is possible that they will be attributed as “*Confirmed*” in subsequent change periods if the evidence in the imagery becomes clearer to the operator.
- After finalising the attribution, polygons are committed to, and stored in the RSC spatial database along with an operator attribution so they can be accessed for quality assurance checking and subsequent reporting.
- To remove any potential subjective bias between operators, a mechanism is in place to minimise the same operator checking the same scene twice in row. This has been implemented by automatically creating custom scene lists to check for each individual operator.

### 3.5 Quality assurance checking

- A further quality assurance check is undertaken by an independent, experienced operator of all *confirmed* vegetation clearing polygons only. If there is disagreement between operators, resolution will be met between the operators with a default to attribute the vegetation change as “*Uncertain*” if there remains less than a very high degree of certainty between both operators.

### 3.6 Tracking and Reporting

- Each fortnight, a script is run which applies an automated procedure to generate a shapefile containing only those polygons which have been manually assessed and quality assured as vegetation clearing, within the specifications outlined herein.
- The shapefile will be uploaded via FTP and notification will be emailed to Department of Resources following each reporting period. Refer to Section 3.7 for file specifications and Section 3.8 for system timing and frequency of reporting.
- RSC maintain a spatial database tracking and reporting system which tracks image acquisition, date of detection, date of checking, and final reporting period.

### 3.7 File specifications

#### 3.7.1 File naming convention

- File naming follows RSC standard file naming convention. Files are named as follows;

*cvmsre\_qld\_d<imageDateRange>\_aexg0\_ed<checkDateRange>.zip*

Where

The *imageDateRange* is a pair of *yyyymmdd* strings showing the earliest and latest imagery dates which are a part of this report;

And

The *checkDateRange* is a pair of *yyyymmdd* strings showing the earliest and latest dates on which polygons were manually checked as clearing

#### 3.7.2 Polygon attributes

- Polygons are attributed as shown in Table 2.

**Table 2 Polygon attributes for shapefile to be provided to DNRM and archived on the HPC at Ecosciences Precinct**

Name	Type	Value(s)	Description
Scene	Text	t<utm_zone><global_tile>	Sentinel-2 tile grid identifier
Startdate	Text	yyyymmdd	Satellite overpass date of baseline image for period. This is a dry season image.
Enddate	Text	yyyymmdd	Satellite overpass date of the most recent image being compared against the baseline image.
AreaHa	Integer	Area (as number)	Polygon area, hectares
VegStatus	String	LeastConcern OfConcern Endangered	Vegetation status where the status assigned is the highest status of all intersecting regional ecosystems

### 3.8 System timing and frequency of reporting

- Table 3 provides a Gantt chart which illustrates how the fortnightly EDS processing and reporting will operate over a typical one month period.
- The report is in the form of 2 shapefiles which is provided to LSI.

***cvmsre\_qld\_d<imageDateRange>\_aexg0\_ed<checkDateRange>\_zcActivity.shp***: This file includes counts of operator checked scenes that are relevant to the scene/editing date restrictions as noted in the usual EDS report filename convention. This is a vector file with footprints for all 237 EDS sentinel-2 scenes highlighting the following count fields:

- i. cReport : Count of checked scenes relevant to this report.
- ii. cSceneYes: Count of checked scenes having 'y' clearing events.

- 

- A second file describes scene availability counts for Sentinel-2 scenes for the actual cut-off dates relevant to a given report batch.
- The file naming convention is *cvmsre\_qld\_d<BatchcutoffDateRange>\_aexg0\_zcAvail.shp*

Where

The *BatchcutoffDateRange* is a pair of *yyyymmdd* strings showing the earliest and latest batch dates which are a part of this report.

- 1) Overall counts within this file will not necessarily align with those in 1), in fact rarely so would be the case, but generally should converge when aggregating for longer reporting periods. This is a vector file with footprints for all 237 EDS sentinel-2 scenes highlighting the following count fields:
  - cAvail: Count of sentinel-2 scenes per RSC imagery availability.
  - cCloudy: Count of available sentinel-2 scenes having overall cloud cover  $\geq 20\%$ .
  - cIntract: Count of EDS scenes having too many detections.
  - cEmpty: Count of EDS scenes having no detections.

### 3.9 Redundancy and contingency

- DES will ensure an appropriate number of experienced operators are trained to undertake the manual processing steps required for EDS.
- In the event of HPC failure or downtime, it is expected that there will be a lag in reporting. DES will endeavour to assign an appropriate level of resources to bring EDS back to currency.
- EDS is reliant on Sentinel-2 imagery. In the event of satellite failure or limited access to available imagery, Landsat data will continue to be available if necessary to enable continued EDS operation.

### 3.10 Dependencies and risk management

- EDS is dependent on a fully functional high performance computing system (HPC) i.e. a multiprocessor compute cluster, high performance mass storage array and automated robotic tape library at the Ecosciences Precinct. The maintenance of the HPC system and a high speed connection to the Australia's Academic and Research Network (AARNet) is subject to ongoing resource requirements.
- The Copernicus program is based on an open data policy of the European Space Agency. In the unlikely event that the policy is changed, alternative sensors such as Landsat will be available to continue EDS reporting.

- EDS is dependent on suitably qualified and skilled staff to maintain the automated components of the system and to undertake the manual processing stages. DES will train a number of staff in EDS operations to ensure some backup for inevitable staff absences.
- Timely system updates when authoritative vegetation management data sets (eg. Regulated Vegetation Management maps and Regional Ecosystem maps) are updated as directed by Department of Resources Operational Support.
- DES is sometimes required to respond to natural disaster situations which can take staff and resources offline from other programs, which could include EDS. DES will communicate to Department of Resources any situations in which EDS processing is to be delayed in these situations and managed and negotiated in partnership with Department of Resources.

## Purpose

The purpose of this procedure is to achieve state-wide consistency for the Early Detection System (EDS) Hub team members undertaking prioritisation and data entry of detected vegetation cover changes into the EDS feature service. Additionally, this procedure provides guidance for the initial processing of the EDS CIRaM incident and actioning standard low priority compliance responses.

## Rationale

EDS prioritising occurs across the state by regional Natural Resource Management Officers, this group is known as the EDS Hub. The procedure will support state-wide consistency in prioritising, recording, actioning and reporting on EDS detections.

## EDS overview and timeframes

EDS has been operational since February 2016, with the system developed to support early detection and engagement with landholders regarding identified changes in vegetation cover across the state. It is a proactive tool used to influence positive behavioural change, through the use of innovation and technology, by rapidly detecting woody vegetation cover change across Queensland with satellite-based imagery. The system and process has evolved significantly since it was developed, with continual identified improvements and enhancements.

The governance framework surrounding the involvement of key contributors to the EDS process is outlined in the EDS Governance – Roles and Responsibilities document available on the EDS page of the [Compliance SharePoint](#) site (under 'user documents').

The EDS process is shown in below, identifying the key contributors' involvement, key steps and timeframes associated with each step.

## EDS prioritisation roles

- **EDS Co-ordinator**

One person in the EDS Hub team will be assigned to undertake the role of EDS co-ordinator. The EDS co-ordinator is responsible for collating regional responses once prioritisation is complete, checking the csv spreadsheet, distributing the data and a summary of the detections to CIRaM admin, Divisional Support (DS) Compliance and Vegetation Management officers from each region.
- **EDS Regional Representative**

EDS hub representatives allocates cases to be prioritised to that region's hub team. Emails the EDS co-ordinator when prioritisation in that region is complete and provides a summary of outcomes. If a region does not have the capacity to prioritise the batch within 5 business days, the representative of that region contacts the EDS co-ordinator by the end of day 3 (Wednesday) to discuss solutions.
- **EDS Hub Team**

Staff from each region nominated to undertake prioritisation, processing and management of EDS detections. The team informs their regional representative once they have prioritised their assigned cases.
- **CIRaM Admin**

Nominated officer from DS Compliance responsible for loading all 'likely unexplained' EDS detections into CIRaM.

- **DS Compliance representative**

Representative to co-ordinate fortnightly EDS Hub meetings and oversee the EDS process. Also escalates issues identified in the EDS Hub to the Vegetation Compliance Working Group as needed and facilitates any system changes or enhancements with LSI or DES (if required).

- **Land and Spatial representative**

Receives the computer detection output the Department of Environment and Science created and uploads it to the EDS feature service. Removes areas that are likely exempt and to which the VMA does not apply. Maintains and improves the overall display and functionality of EDS feature service and EDS viewer, and adds or removes datasets when required.

Published on Resources Disclosure Log  
RTI Act 2009

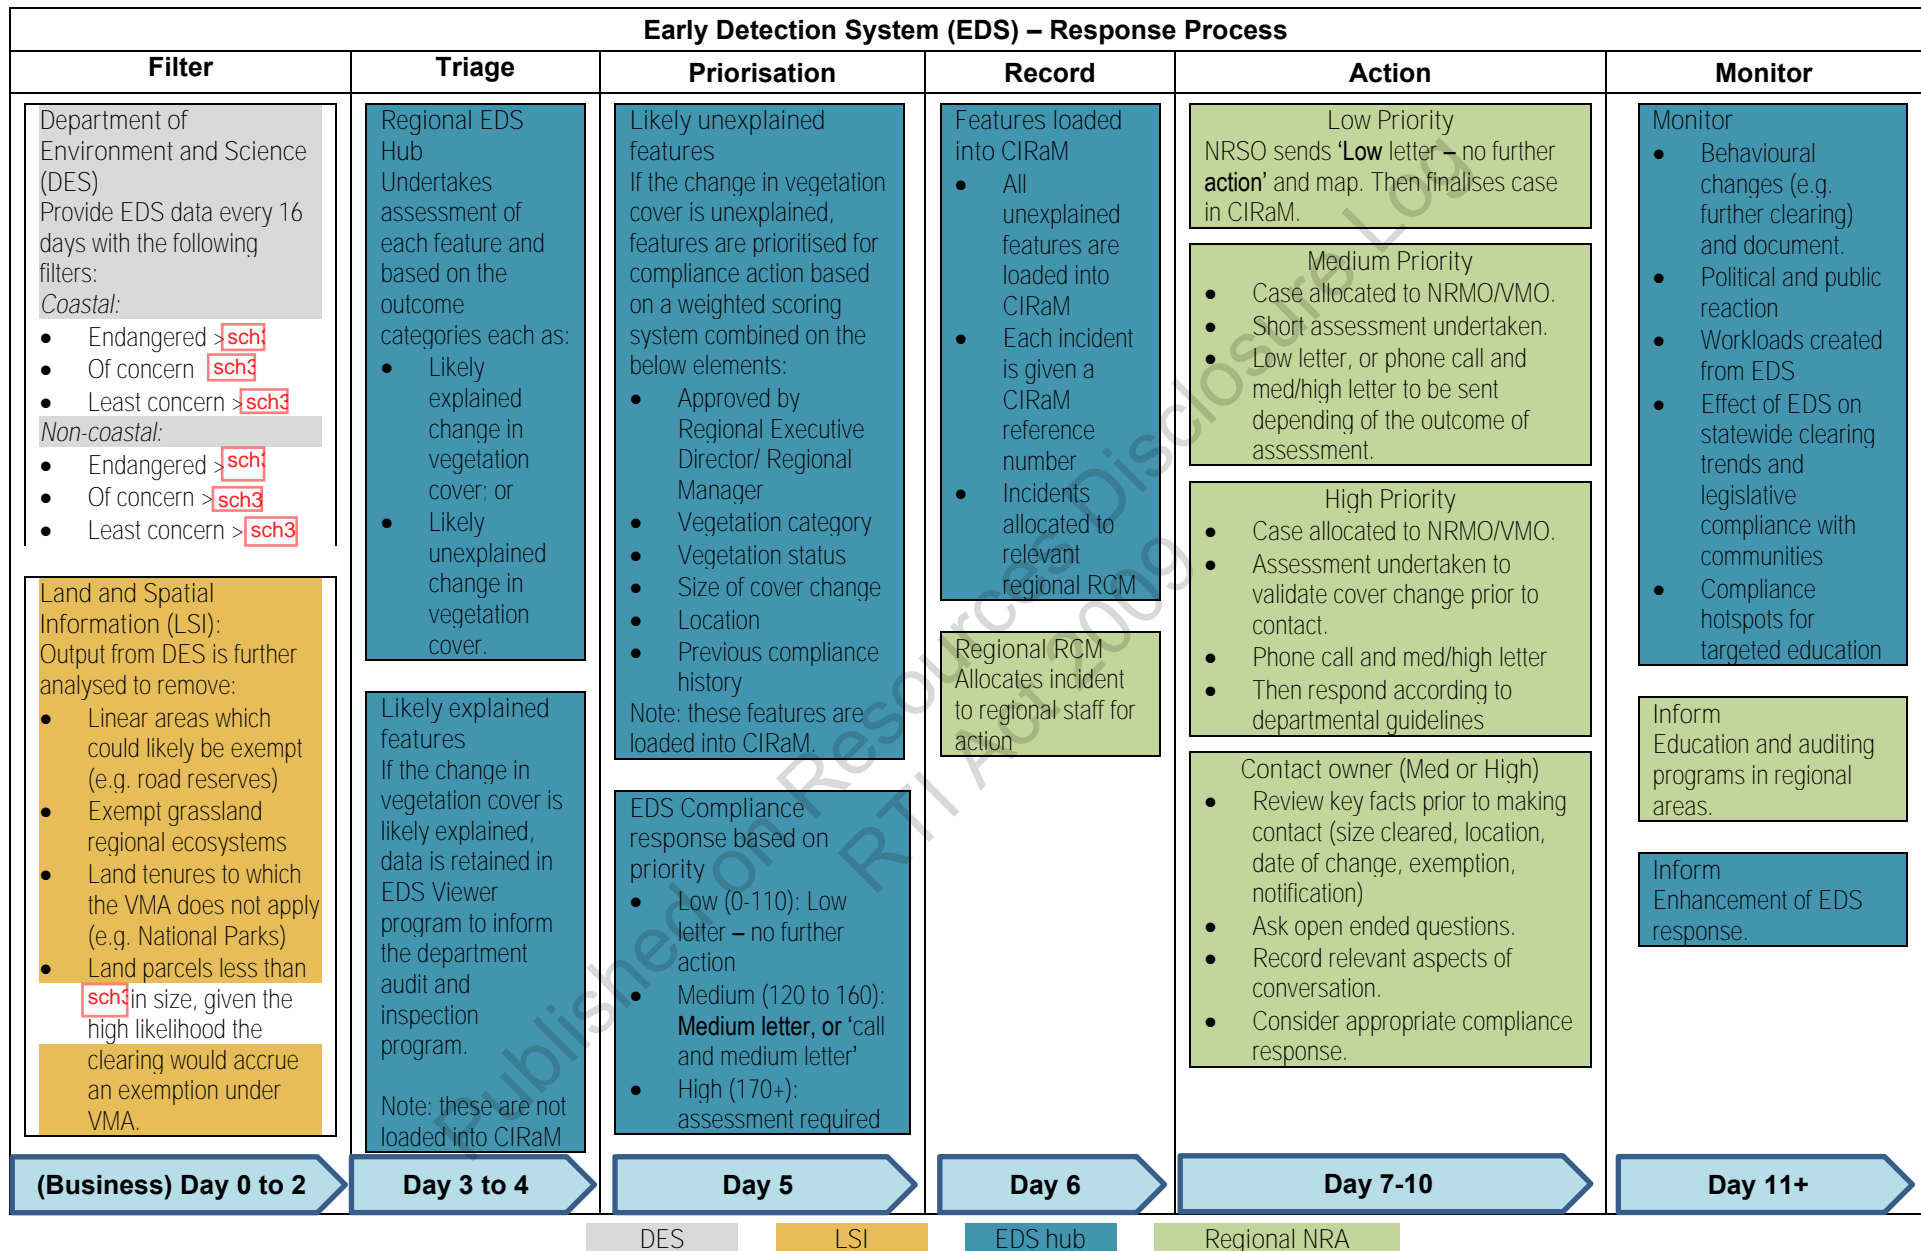

Image 1. EDS response process

# Procedure

## 1. User setup and system requirements

To undertake EDS prioritisation and make associated maps, the following access to departmental systems is required:

- [eLVAS](#)
- [CIRaM](#)
- [OSACN](#)
- [SmartMap Information Services](#) (SMIS)
- [EDS Feature Service](#) 2 Tabs (also referred to as Maroon EDS) – used for prioritisation. See Section 2 to 8 of this document for instructions on how to use this service.
- [Early Detection System viewer](#) (also referred to as Green EDS) – used for making EDS maps.
- [Planet Explorer](#) EDS access request forms are located on the [Compliance SharePoint page](#). Details about the log in requirements for the systems is outlined in the relevant sections of this document.

## 2. Accessing and navigating the EDS Feature Service

Go to [EDS - Feature Service](#) (2 tabs) sign in page.

Google Chrome is the recommended web browser for EDS – Feature Service.

- 2.1. Sign in using your QSpatial Live username and password (ending with ‘\_qgsp’)
- 2.2. You will be prompted to sign in using your Lands username and password (Image 2)
- 2.3. Once signed in, the EDS feature service (maroon 2 tab) will open (Image 3). Click OK.

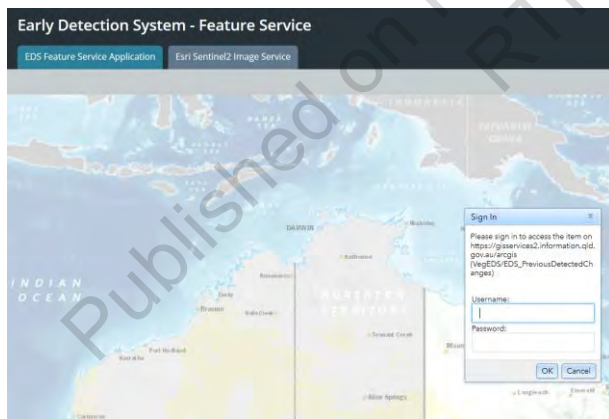

Image 3. EDS feature service (2 tab), use land sign in

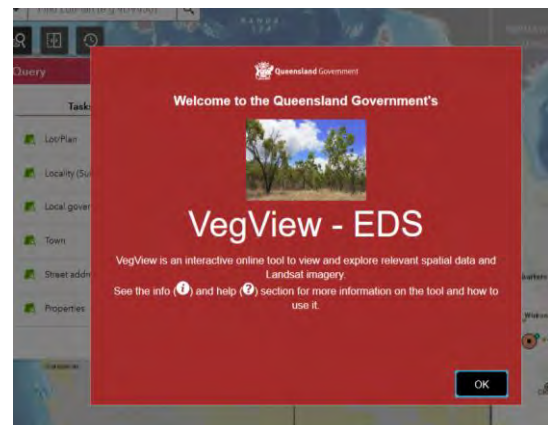

Image 2. Opening page of feature service (maroon)

2.4. Image 4 explains the first page visible in the EDS feature service.

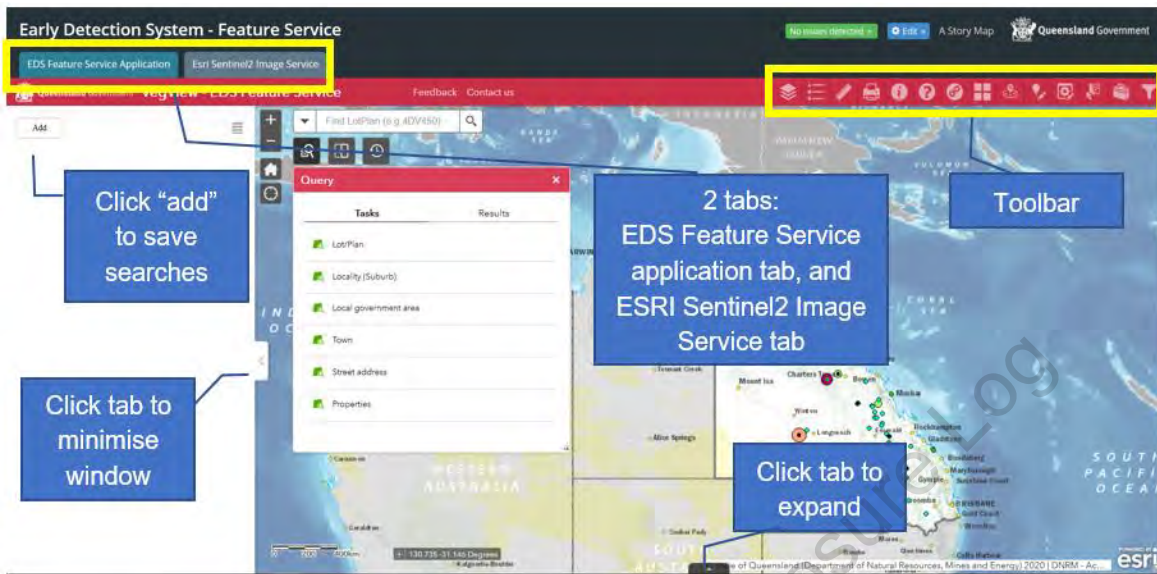

Image 4. EDS feature service explained

2.5. Click the tab at the bottom of the screen to expand the attribute table (Image 4 and Image 5).

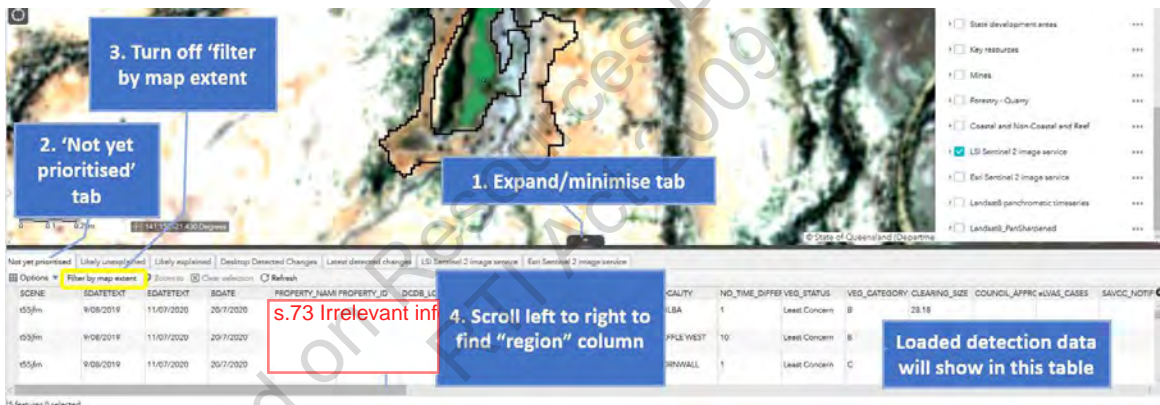

Image 5. Open Attribute Table

2.6. Sign in again using your Lands password, if requested (Image 2). If there are no entries in the table, click on the 'Filter by map extent' button to turn it off (Image 5).

2.7. For more information on how to use EDS and what the buttons mean, click on the help "?" button. This will show a quick overview of *How to use VegView* and provides a link to a 13-page document "*VegView user guide*".

### 3. Exporting EDS not yet prioritised data

The EDS Hub team members will receive an email from the Land and Spatial Information (LSI) Team advising that the latest EDS feature service batch is available for prioritisation.

- 3.1. An EDS Hub rep from each region will export the 'not yet prioritised' table to keep track of the total detections for their region and allocate cases or forward the spreadsheet to that region's EDS Hub team members.
- 3.2. To export this data, click on 'Options' to export all 'not yet prioritised' detection data as a .csv spreadsheet (**Error! Reference source not found.**). Make sure the 'Filter by map extent' button is turned off.  
To see only the detections for a particular region - Click 'Options' then 'Filter' and filter the table to your region prior to exporting the table

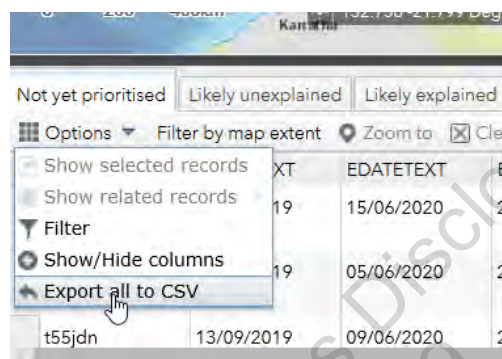

Image 6. Exporting 'not yet prioritised' data to .csv file

- 3.3. LSI sometimes add detections to the 'likely explained' table prior to the start of prioritisation, check this table to calculate the total number of detections for the region.
- 3.4. Regional workloads should be considered at this stage to ensure prioritisation and co-ordination of state-wide data is completed within the required 5 business days. Therefore, contact the EDS coordinator by the end of Day 3 (Wednesday) to request assistance from the other regions to help with prioritisation if needed.

### 4. Undertake desktop assessment

The purpose of the desktop assessment is to check the accuracy of the detection details, confirm that a change in vegetation canopy cover has occurred (based on imagery assessment) and identify whether there is an obvious explanation for the cover change or a reason to exclude the detection (e.g. 'likely mining activity').

The EDS Hub team can start the desktop assessment once LSI provide an email to the EDS Hub Team stating the latest EDS feature service batch is now available for prioritisation.

- 4.1. Complete **Attachment A – EDS Desktop Assessment**. Attachment A contains the steps to undertake to complete a prioritisation.
- 4.2. Consult **Attachment B – Guide to entering data into Batch Attribute Editor fields**. This guide provides more information about the type of information to enter in Batch Attribute Editor and what actions are required to correctly fill in the fields.

You may record your findings in the 'Not yet prioritised.csv' Excel spreadsheet as you work through the desktop assessment. The findings can then be copied and pasted into the Batch Attribute Editor. Using this spreadsheet can be particularly useful if you have a large number of detections to work through.

Note: Scoring as per **Attachment C** may change as you fill out the batch attribute editor. Ensure that you double check the final scoring and that it matches up with the 'PRIORITY\_DESCRIPTION' field.

Section 7 provides guidance on how to enter data in the Batch Attribute Editor.

#### 4.3. Select the relevant spatial layers used for the desktop assessment:

- a) In the EDS Feature Service open the detection data table as explained in Section 2. If there are no entries in the table, click on the 'Filter by map extent' button to turn it off.
- b) In the table double click on the detection you will be assessing. The map will zoom to the detection. This is the best way to ensure that you have zoomed to the correct detection. There are other ways to zoom to detections, such as using the "Query" window to search using Lot/Plan.
- c) Using the tool bar at the top right (Image 4), click on the layer list  button, to drop down the layer list.
- d) Some layers used for the desktop assessment should already be checked but you will also need to use the following:
  - System Detected Changes: ensure the parent "System detected changes" plus 'Latest detected changes' and 'Previous detected changes' are ticked and visible.
  - Land parcel information. Expand Land parcels drop down (using arrow) to select (Cadastral parcel lines, Easements and Properties)
  - Vegetation information. Expand QLD Veg Management level (using arrow) to select (RVM, Vegetation management regional ecosystem map and more)
- e) Some of the layers can be made transparent by clicking on the three dots on the right of the parent layer name (**Error! Reference source not found.**), For example. "Vegetation Information", not the child layer "Regulated Vegetation Management map".

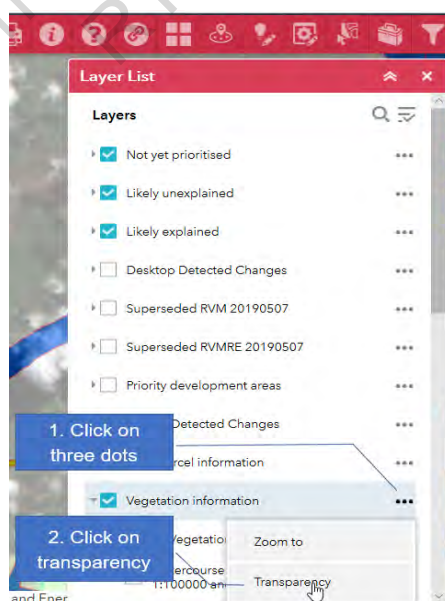

Image 7. Making a layer transparent

- f) To find what the colours for layers on the map mean, there are three ways:
  - Drop down arrow in the layers tab shows you a legend for that item

- Legend button at the top of the menu (button next to layers) shows the legend for all items that are turned on
  - Use the information button ("i" on top menu) and click the polygon, which will show the attribute table for that polygon (this is particularly useful when there are 2 similar colours in the layer).
- g) In order to understand what all the labels mean and if you may need to add extra layers for your prioritisation, other than those outlined above, reference the table at the end of **Attachment A** entitled "Datasets available for display in EDS feature service".
- h) If the EDS polygon overlaps multiple lot/plans:
- If the whole detection is likely explained, enter text in the *EDS\_HUB\_ASSESSMENT* column that the detection is across multiple lots.
  - If all or part of the detection is likely unexplained: check in SMIS if all lots are owned by the same person/company:
    - If lots have different owners, email LSI to split the detection polygon using the lot/plan boundary. Then assess both detections.
    - If lots have the same owner, record additional lot/plan details in comments, and assess as usual. Once CIRaM case is created, manually add the additional lot/plan to case.
- i) A list of datasets available in EDS, and what each layer in the EDS legend can be used for (exemption or referral) is found in **Attachment A**.
- j) Turning off all layers including imagery can be helpful. The topographic layer underneath might show a wetland or airstrip that helps explain the change.

## 5. Assessing imagery

Landsat-8 images have a 30m resolution, and each spot is revisited every 16 days. However, the black and white time slider can be very useful to see changes over large areas over time.

Sentinel-2 images have a 10m resolution (pixel size) and each spot is revisited every 5 days.

PlanetScope imagery has a 3m resolution, and each spot is revisited every day. Planet can be useful to clarify the week/month cleared where EDS imagery has regular cloud cover; or clarify if the change of colours is due to a change of foliage or grass cover (check if trees are present before and after the change). Planet Explorer is not included as a separate tab because most people prefer to display EDS on one screen and Planet Explorer on the other screen to assist in finding the location and comparing the vegetation change detected by the different satellites.

For tips and strategies on interpreting satellite image go to "[Remote sensing and VMU](#)" on the Statewide Vegetation Sharepoint, check:

- <https://earthobservatory.nasa.gov/features/ColorImage>
- <https://www.arcgis.com/home/item.html?id=fd61b9e0c69c4e14bebd50a9a968348c>
- <https://sentinel.esa.int/web/sentinel/missions/sentinel-2>

### 5.1. Landsat Imagery

Although Landsat imagery has a 30m pixel size, the Time Slider can "paint the picture" of what has happened in the last 6-12 months.

- a) To view Landsat imagery, select the EDS Feature Service Application Tab (Tab 1).

- b) Turn on Landsat8 panchromatic timeseries in the layer list, then click on the Time Slider button at the top left of the screen (**Error! Reference source not found.8**). When viewing time series imagery play the entire series through before pausing or manually moving between images, as the imagery needs time to load.
- c) Be sure to untick LSI and ESRI imagery as they occur above Landsat8 panchromatic on the list and will block the ability to view images on the time slider.

Image 8. Viewing Landsat timeseries imagery

- d) If needed, add the vegetation layer and adjust the transparency (Image 7) so you can see the extent of regulated vegetation areas while watching the Landsat time lapse imagery.

## 5.2. LSI Sentinel Imagery

LSI Sentinel Imagery Service is available in EDS Tab 1. Follow the process outlined below to apply a filter to view imagery from a different date.

Due to storage limits, only the base layer (which could be last year), and images captured the last 1-2 months are available. If LandSat shows the change occurred further back, use ESRI Sentinel-2 imagery in the EDS tab, use the *ESRI Sentinel-2 tab* where a swipe tool is available, or use Planet.

- a) Turn on the LSI Sentinel-2 image service layer (**Error! Reference source not found.9**). Be sure to untick the Landsat layer in the layer list and click on the “clock” to remove the time slider pop-up, to prevent a big delay in the LSI Sentinel image showing.

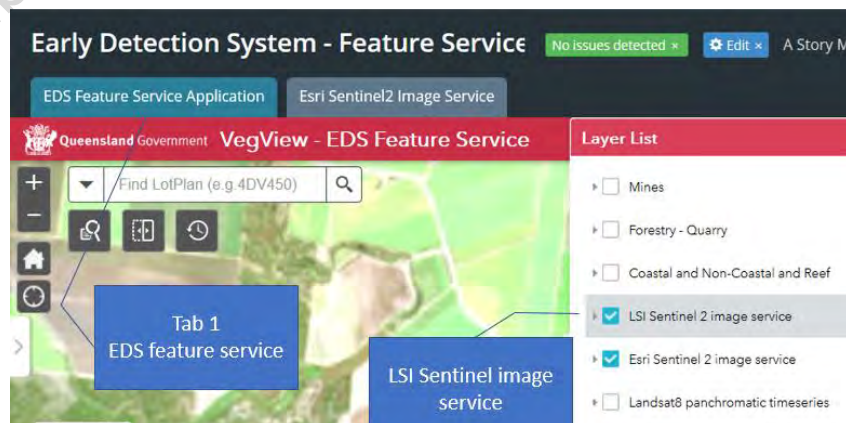

Image 9. LSI Sentinel-2 layer in EDS Feature Service Application Tab

- b) Click 'information'  and then click just outside the EDS detection polygon to bring up the Feature Information window
- c) Click on the 'Next feature' button  in the top right of the window, until you get to the window with a Polygon ID code starting with x (**Error! Reference source not found.0**)

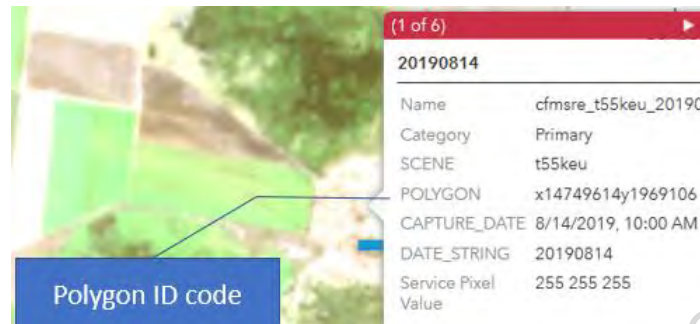

Image 10. Polygon ID code

- d) Select Filter tool  from the toolbar (**Error! Reference source not found.1**)

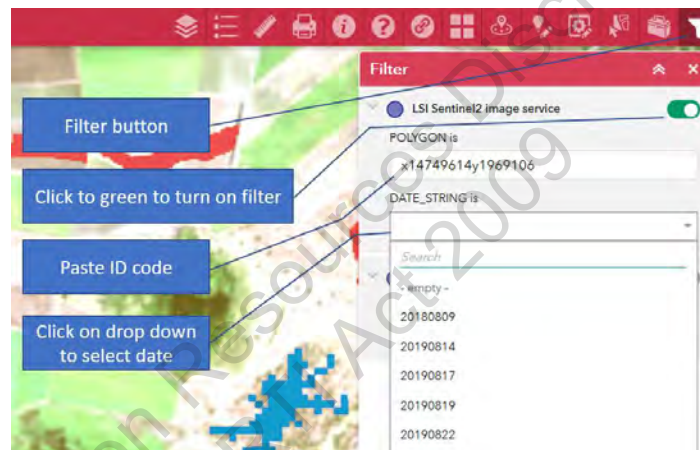

Image 11. Viewing LSI Sentinel-2 image by date

- e) Copy the Polygon ID code and paste it into the Filter tool (**Error! Reference source not found.**).
- f) Click the button to turn on the filter tool. When turned on it will change to green (**Error! Reference source not found.**).
- g) Click on the drop down box to see all the available LSI Sentinel2 images and select the image date you would like to view (**Error! Reference source not found.**). The image will load on your screen.

### 5.3. ESRI Sentinel-2 Imagery

ESRI Sentinel-2 imagery is available as a layer in Tab 1. Follow the process below to apply a filter to view imagery from a different date.

ESRI Sentinel-2 can also be viewed as a stand-alone application in a separate tab, which provides additional functionality.

- a) To view the ESRI Sentinel-2 imagery which covers the whole of Queensland, turn on the ESRI Sentinel-2 image service layer in the layer list (Image 9).

- b) Select Filter tool  from the toolbar (Image 12).

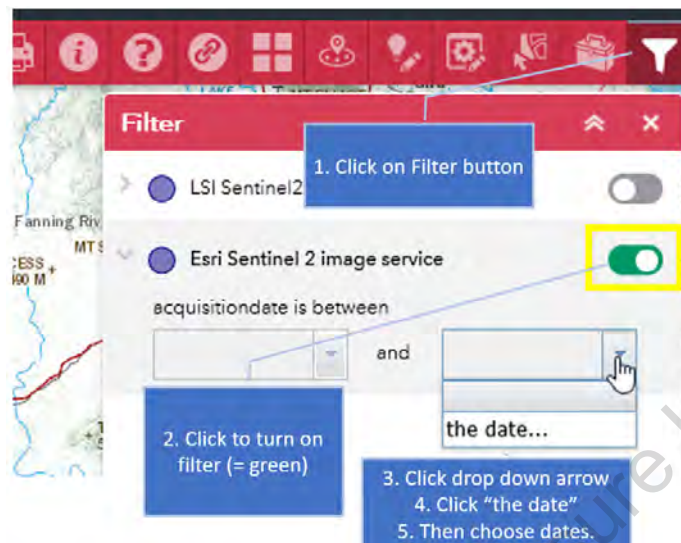

Image 12. Viewing Esri Sentinel 2 imagery between select acquisition dates

- c) Untick the LSI Sentinel (make sure it shows as grey, not green: Image 12)
- d) Select beginning and end acquisition dates and the filter tool will pick the best image between those two dates (Image 12). Please note:
- It is best to choose dates that are a fortnight apart and it will select the best image from that fortnight.
  - It may be slow to bring up the image and the further apart your dates the longer it will take to bring up an image.
  - You can reduce your date length to less than 2 weeks if you want to narrow down to a particular date, but it may then show up images with cloud cover.
  - There is approximately 12 months of ESRI Sentinel 2 images.

#### 5.4. Exporting an EDS detection polygon for imagery analysis

Exporting a detection polygon from EDS can be useful for further analysis. Once exported, the polygon can be added to:

- The Sentinel Tab
- Planet Explorer (<https://www.planet.com/explorer/>), which might help to identify when the clearing occurred.
- GIS - to check if the layer overlaps with a permit shapefile.

To export an EDS detection polygon:

- a) Click on the Select tool from the toolbar.
- b) Make sure the “select” button is dark green.
- c) Click on the EDS detection polygon. Tip: Turn off layers that you don't need selected if it is taking a long time.
- d) If the tool has selected the detection a number will appear in the select tool dropdown box (Image 13).

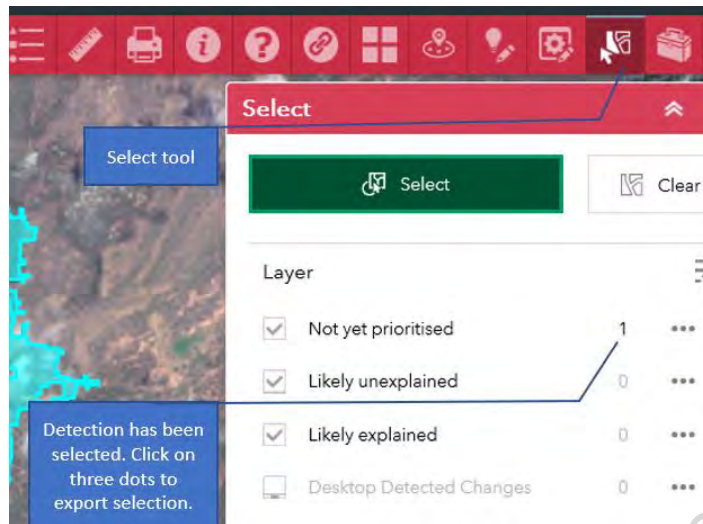

Image 13. Selecting EDS detection polygon

- e) Export the EDS detection polygon to a GeoJSON by clicking on the three dots beside the Latest detection changes (**Error! Reference source not found.**).
- f) Select 'export to GeoJSON' (Image 14).

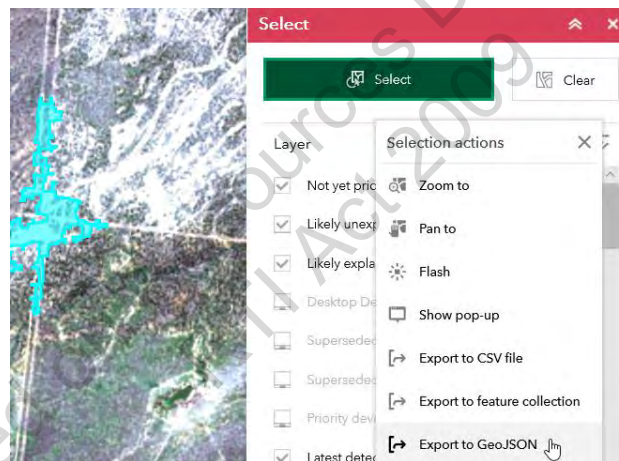

Image 14. Exporting EDS detection

- g) Save to C Drive or a similar temporary drive as you will not need to keep this downloaded shape file.

Note: Planet Explorer and Sentinel will accept GeoJSON. ArcGIS accepts feature collection (Image 14).

## 5.5. ESRI Sentinel-2 Image Server Tab

- a) Click on the *ESRI Sentinel2 Image Service* Tab (Tab 2). It will automatically be zoomed to Strassbourg.
- b) Click on Add Data from ArcGIS Online  from the toolbar on the left side of the screen (**Error! Reference source not found.**). Log in using your QSpatial Live (EDS) username and password (First name.Last name\_QGSP). Note: this is case sensitive.

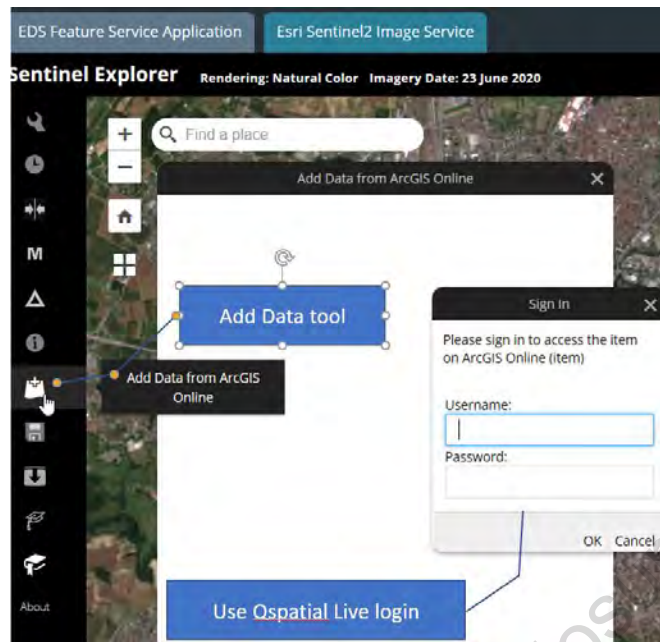

Image 15. Add data tool

- c) In the Add Data from ArcGIS Online window, click on File, then click on Browse (Image 16). Navigate to where the exported GeoJSON (undertaken in Section 5.4) was saved to and click open, usually it will be saved in your Downloads folder, or you can drag and drop the file.

Image 16. Adding data to Esri Sentinel2 Image Service Tab

- d) The EDS detection will be added to the imagery (in blue) and zoomed to (**Error! Reference source not found.**). The EDS detection polygon blue fill makes it hard to see the underlying imagery, so you need to delete it from the *Add Data from GIS Online* window by clicking on *Layers* and then clicking on the trash can.

Image 17. EDS detection added as layer

- e) Close the Add Data from ArcGIS Online window.
- h) For a full guide to learn how to use all the tools in the Sentinel tab, click on the App Tutorial tool .
- i) To change imagery colour, click the Renderer button  on the toolbar to change from natural colour to a variety of different satellite colour bands, click on the “?” button for information about the colour band.
- j) To compare two images (to see how the EDS detection changes over time), click  to turn on the Time Selector (Image 18). Note: you need to be logged in to use this.
  - i. Scroll to find an early image that you want to compare to a later image. Click on  to set your chosen image as the earlier, ‘secondary’ image.
  - ii. Move the slider to choose a ‘primary’ image from a later date.
  - iii. When a date has been selected, click on the Swipe tool  to compare the two images (Image 19).

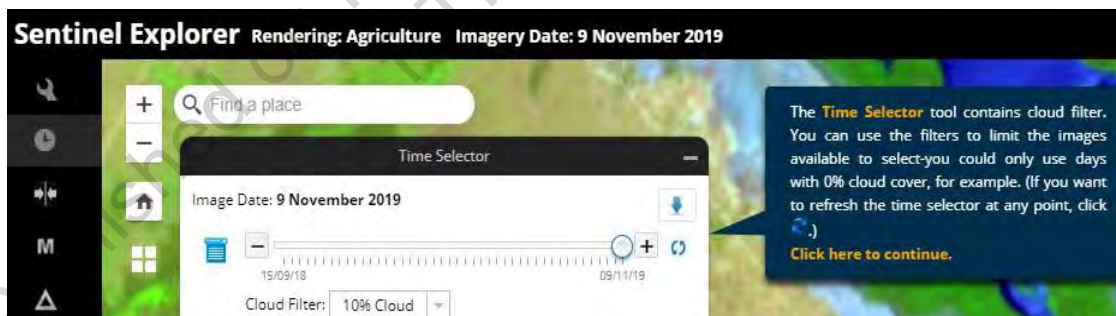

Image 18. Esri Sentinel2 Tab - Comparing two dates

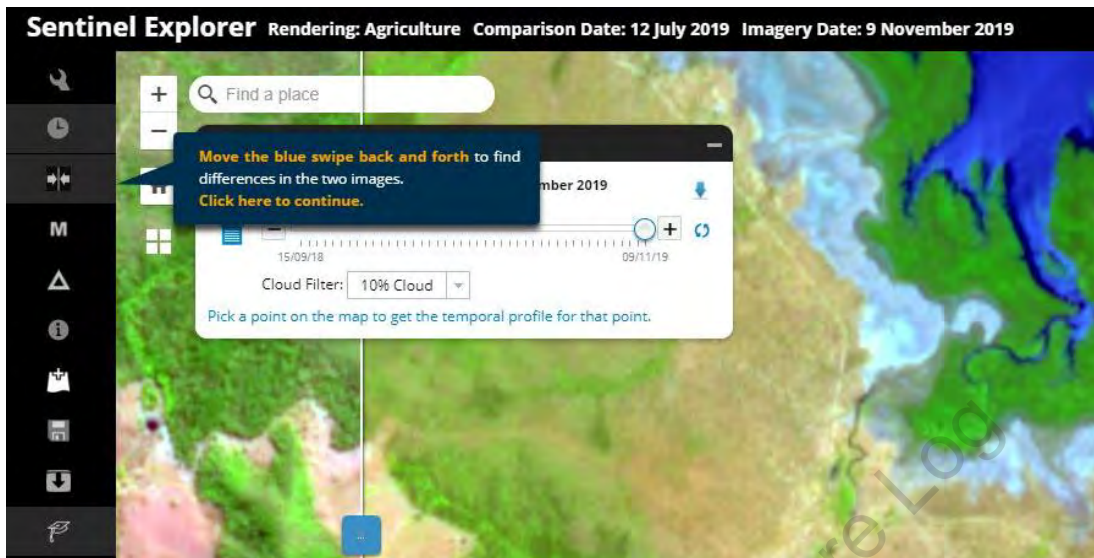

Image 19. Esri Sentinel2 Swipe tool

## 5.6. Planet Explorer

- a) To view PlanetScope imagery open <https://www.planet.com/explorer/>. Log in using your email address and Planet password.
- b) To add the exported GeoJSON file (undertaken in Section 5.4), click on the Upload tool or drag and drop the file onto the imagery (Image 20). Click Next. The EDS polygon will be added and zoomed to.

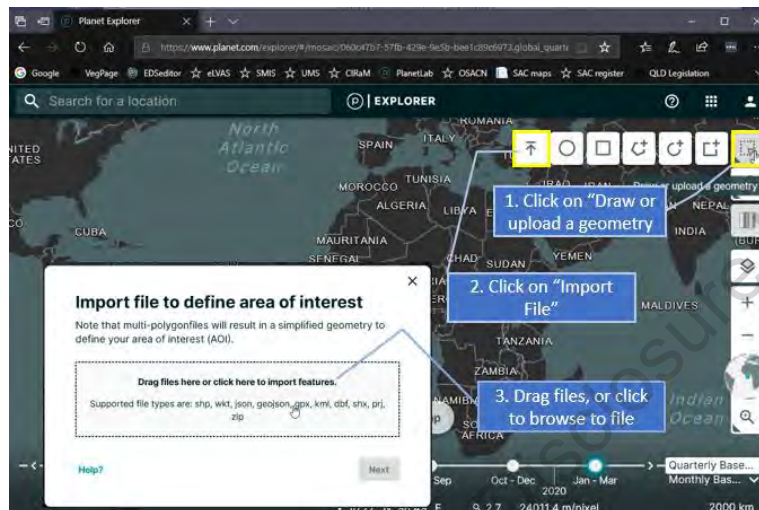

Image 20. Adding EDS polygon to Planet Explorer

- c) Planet Explorer will only show imagery inside the EDS detection polygon. To create a larger area of interest, click on “draw or upload a geometry” and then drawing a rectangle (Image 21).

Image 21. Planet Explorer Area of Interest

- d) Planet Explorer will display all available imagery in the pre-set date range. If you want to add more dates, click on “Dates” on the top of the list, or “Modify date range” at the bottom of the list (Image 22).

A window will pop up with a calendar of dates. Browse to select the first date followed by the last date and click the save button. All available imagery for the date range selected will now be displayed.

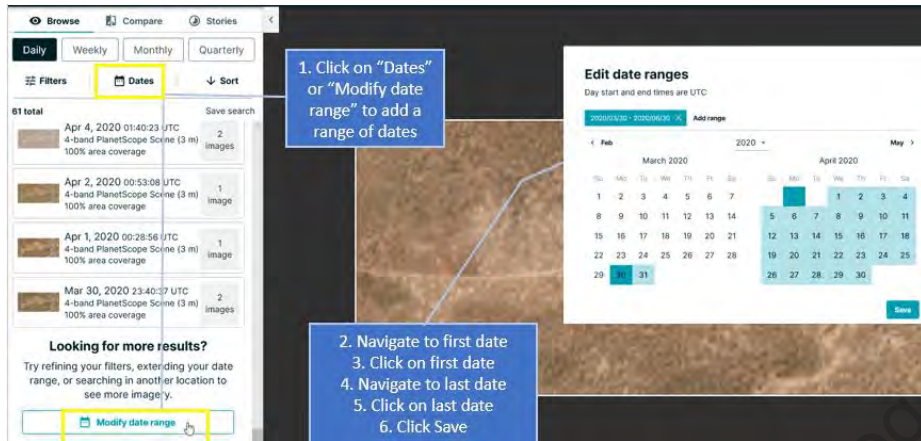

Image 22. Modify date range in Planet Explorer

- e) To compare images of two dates, click on “Compare” in the top right (Image 23). You can compare either a Quarterly mosaic or a Daily image. Scroll to a date, then drag and drop this date to the left or right column. Once you have two images to compare, a slider button appears.

Image 23. Compare two dates in Planet Explorer

- f) Other features of Planet Explorer include:
- Access to a measuring tool in the righthand toolbar (Image 23)
  - Ability to save search and access your saved searches (Image 24)
  - The quarterly mosaic allows you to investigate whether the recent change is a seasonal change (e.g. wet to dry season) by comparing the current quarter with the same quarter last year.

For more information about the other things you can do on Planet Explorer, visit: <https://developers.planet.com/planetschool/>

Image 24. Location of save search, and access your saved searches

## 6. Change the total area of detected change

As part of the assessment of the imagery, you may have identified a smaller or larger area as unexplained, compared to the EDS detected change. This needs to be recorded.

To ensure data integrity, the polygon showing the EDS detected area cannot be altered. Therefore, you will need to record your desktop detected changes, including the assessed area of the detected changes, as follows:

### 6.1. Decrease the area of unexplained change

If part of the EDS detected change is explained, but part of the change is unexplained, the clearing size score might be lower than the EDS system has preloaded.

There are several options. The chosen option will depend on the extent detected by EDS, the priority given, and regional practices as follows:

- If the area of unexplained change is slightly smaller than the outlined area, make note of this in the comments, check if the priority score will change and adjust the priority description where needed.
- If the area of unexplained change is considerably smaller, the landholder could be distracted or confused by the whole area that is outlined and focus their attention to the *explained* part only. If this is the case and the priority is low (which means EDS will be used to create a map): create a polygon using *Desktop Detected Changes* (see section 6.3). Also make note of the updated size and the polygon drawn in the *Desktop Detected Changes* layer in the *comments* field to alert the person making the map. Check if the priority score will change and adjust the priority description where needed.
- If the priority is medium or high and/or further investigation is required: make note of the updated size in the comments, check if the priority score will change and adjust the priority description where needed. Creating an accurate polygon and a map will be part of the further investigation.

### 6.2. Increase the area of unexplained change

If you found more unexplained clearing than EDS detected:

- a) create a polygon in the Desktop Detected Changes layer (see Section 6.3);
- b) make note of the updated size in the comments;
- c) check if the priority score will change; and
- d) adjust the priority description where needed.

### 6.3. Create a polygon in Desktop Detected Changes layer

- a) To record desktop detected cover changes (detected by someone in the EDS Hub team) in EDS, turn on the Desktop Detected Changes layer and Previous detected changes (to avoid double ups) in the EDS layer list (Image 25).

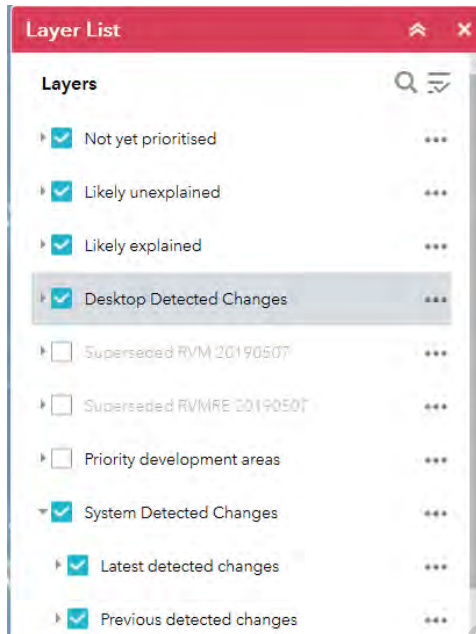

Image 25. Desktop Detected Changes layer

- b) Click on the Smart editor tool  in the toolbar and select the Desktop Detected Changes template (Image 26).

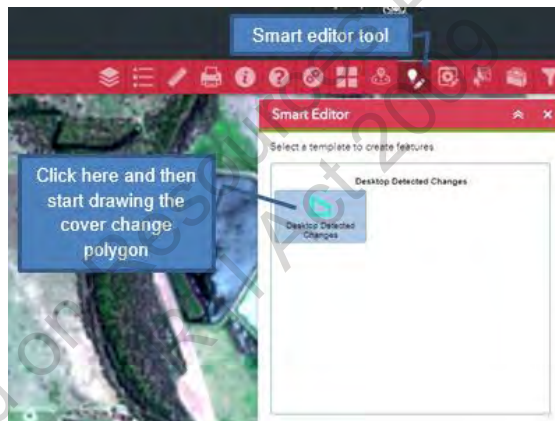

Image 26. Smart Editor Tool

- c) Click around the edges of the additional cover change area to draw a polygon (Image 27)

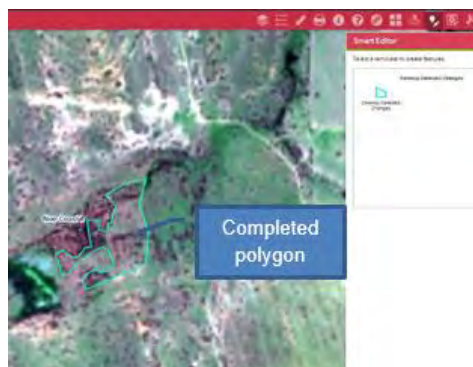

Image 27. Desktop Detected Changes polygon

Tip: Turn on the vegetation mapping and make it transparent to assist with drawing a polygon, so you don't draw a detection in category X.

d) When you have finished drawing the polygon (with a double click) an attribute window will open (Image 28). Fill in as many of the details as you can, but **do not** fill the Area Size as it will be automatically calculated once you click on Save. Note:

- Start date = the date trees are present on imagery
- End date = the date trees are gone and/or a change is evident from imagery

Smart Editor

Desktop Detected Changes

EDS batch number  
86

Start date  
11/9/2018

End date  
11/15/2018

Area Size (ha)  
8.73512405

Comments  
additional cover change area from batch 86

Clear Delete Save

1. Type in the relevant EDS batch date or the most recent batch date
2. Type in an estimated start and end date based on assessment of imagery
3. DO NOT type anything in here. Area size will calculate after you click on Save
4. Type in any other relevant information, e.g. detected through desktop assessment from a public complaint
5. Click Save if you are happy with the polygon otherwise click Delete and start drawing the polygon

Image 28. Desktop Detected Changes attribute table

## 7. Batch Attribute Editor

Batch Attribute Editor is used to record the assessment you have undertaken and to prioritise the cases.

- 7.1. Click on the Batch Attribute Editor tool  from the toolbar, this will open the Batch Attribute Editor (**Error! Reference source not found.**) in a separate window.

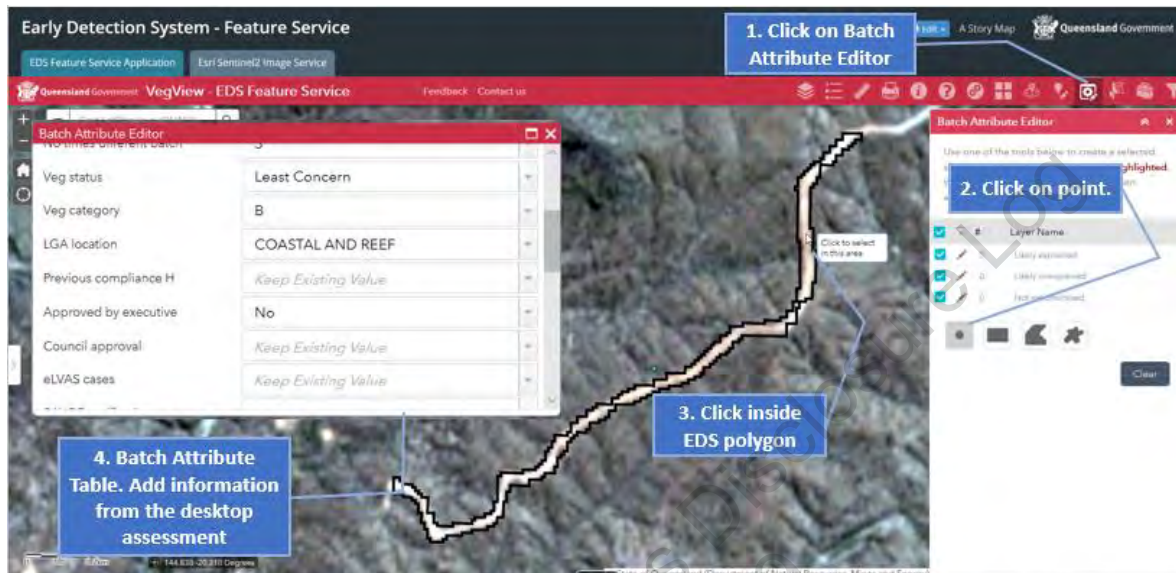

Image 29. Batch Attribute Editor

- 7.2. Click on the point and then click within the detected area to open the editor table.
- 7.3. Enter in the information and notes that were collated as part of the desktop assessment (see Section 4 for details) for each criteria of the case you are prioritising.  
If you have saved the information in the “not yet prioritised.csv” spreadsheet (as an Excel workbook) the findings can be copied and pasted directly into the Batch Attribute Editor Table.
- 7.4. If as a result of the desktop assessment, you have to change one of the drop-down criteria that affects the total prioritisation score, please consult:

- **Attachment C- Guide to CIRaM criteria and scores for vegetation matters** for the available choices in the drop down menus, and the resulting scores;

Note: The “Total scr” field will update automatically if you change a related field. However, automatic changes will only be displayed once you have saved. You can view the total score in the table on the bottom of the screen (in the *not yet prioritised* or *likely unexplained* tabs), once you have clicked “save”.

- 7.5. Information is to be entered into the Batch Attribute Editor as follows:
  - **Do not use commas and semi-colons** as CIRaM will not load any data after a comma.
  - Where no relevant information is found in any of the search fields (e.g. eLVAS cases) put ‘nil’ or ‘N/A’ to indicate that all the required checks and searches have been completed.
  - Maximise the table view to make editing easier

7.6. For **'likely explained'** detections (this includes no clearing detected; under area threshold; mining; duplicate; and non-VMA tenure) you will need to complete:

- The relevant fields that helped explain the detection, for example.
  - enter ADVCC notification details if this explained the detection
  - eLVAS case number for tree clearing permit.
  - Comment: no clearing evident from Landsat, LSI Sentinel and ESRI Sentinel
- EDS Hub Officer;
- EDS Hub assessment free text field to add findings, for example:
  - Exemption x applies
  - Mining production permit ML... applies and clearing consistent with mining
  - 3 hectares least concern in reef/coastal catchment
- The Assessment code field (dropdown options)
- Proposed action: no further action
- And AUDIT\_CANDIDATE where clearing occurred and an ADVCC notification exists.

This (explained) case is now prioritised. It is not necessary to fill out the priority description or other fields.

7.7. For **'likely unexplained'** detections, all of the assessment fields should be completed, including:

- EDS Hub officer
- Comments (your imagery observations including dates between which change occurred, if it is broadscale clearing or if some trees are still present, and if you used LandSat, LSI Sentinel or ESRI Sentinel)
- EDS Hub assessment (explanation why the observed change is not exempt)
- Assessment code field
- Priority description (based on the total score in **Attachment C**)
- Proposed action (e.g. Letter only, contact required, further investigation).

Note: The AUDIT\_CANDIDATE field does not need to be filled out for likely unexplained since compliance action (not an audit) will be taken as a result of the case being likely unexplained.

7.8. Once you have completed your assessment of a detection and exited out of the editor table, press the refresh button on the 'Not yet prioritised table' to move the detection to the relevant table.

7.9. If you want to make edits to your prioritisation after the detection is prioritised, you can access them from the "unexplained" or "explained" tabs.

7.10. If you forgot to enter the assessment code, and the case is no longer in "yet to be prioritised", you can find it in the Latest detected changes tab.

7.11. Once you have prioritised your allocated cases and all of the data has been added into the Batch Attribute Editor, email your region's EDS Hub representative who collates that region's responses.

7.12. The EDS Hub representative from each region should check the tables to ensure that:

- the total number of 'likely explained' and 'likely unexplained' matches total number of detections for the region.

- all detections have been assessed.
- scores of each detection match the priority description.
- all required fields are filled out (correctly).

Contact LSI to retrieve any missing detections or fix found errors.

7.13. Once the EDS Hub representative from each region is satisfied that the tables have been (correctly) completed, they email the EDS coordinator with a summary of the detections in the region. For example: 3 likely explained, 2 likely unexplained (1 medium, 1 low). This needs to be emailed by the end of Day 5.

## 8. EDS coordinator only

- 8.1. If a region does not have the capacity to prioritise all their cases within 5 business days, they should contact the EDS coordinator by the end of the 3<sup>rd</sup> business day (Wednesday). The EDS coordinator then checks if other regions have capacity to assist in the prioritisation of that batch or contacts the DS Compliance representative to check if there are any issues with submitting the prioritisation a day later than usual.
- 8.2. On completion of prioritisation, the EDS coordinator is responsible for distributing the data to CIRaM Admin and providing a summary to DS Compliance and Vegetation Management staff from each of the regions. Each EDS Hub representative will email their region's finding to the EDS coordinator by the end of Day 5.
- 8.3. Export the data as a csv file (see Section 0) from both the 'Likely unexplained' table and 'Likely explained' table (Image 30). Ensure 'Filter by map extent' is deactivated before exporting.

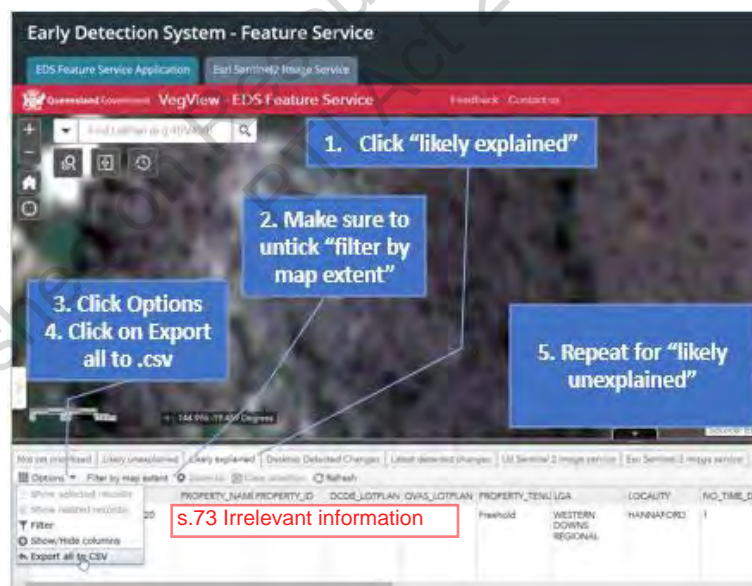

Image 30. Export 'likely explained' and 'likely unexplained' data

- 8.4. Check if the numbers provided by each of the regions match the numbers in the spreadsheets. If not, respond to the relevant EDS Hub representative to clarify.
- 8.5. Double check no commas or semi-colons were used in free-text fields, and if all required fields are filled out.

- 8.6. In relation to the unexplained spreadsheet, check the total score matches the prioritisation description and proposed action. If it does not, respond to the relevant EDS Hub representative and ask the region to fix this.
- 8.7. Attach the explained and unexplained csv spreadsheets to an email titled “EDS Prioritisation batch XX”, and send to the nominated CIRaM admin officers to be loaded into CIRaM (Image 31). Note: the nominated CIRaM admin officer will be advised by Divisional Support – Compliance.

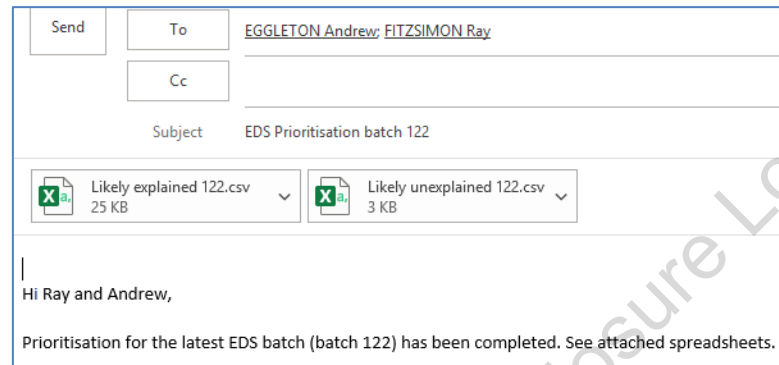

Image 31. Example email to send to relevant CIRaM admin officer

- 8.8. Send a second email with the two csv spreadsheets and a dot point summary of unexplained detections for each region to the EDS Hub team members, DS Compliance and Vegetation Management staff from each of the regions (Image 32 **Error! Reference source not found.**).

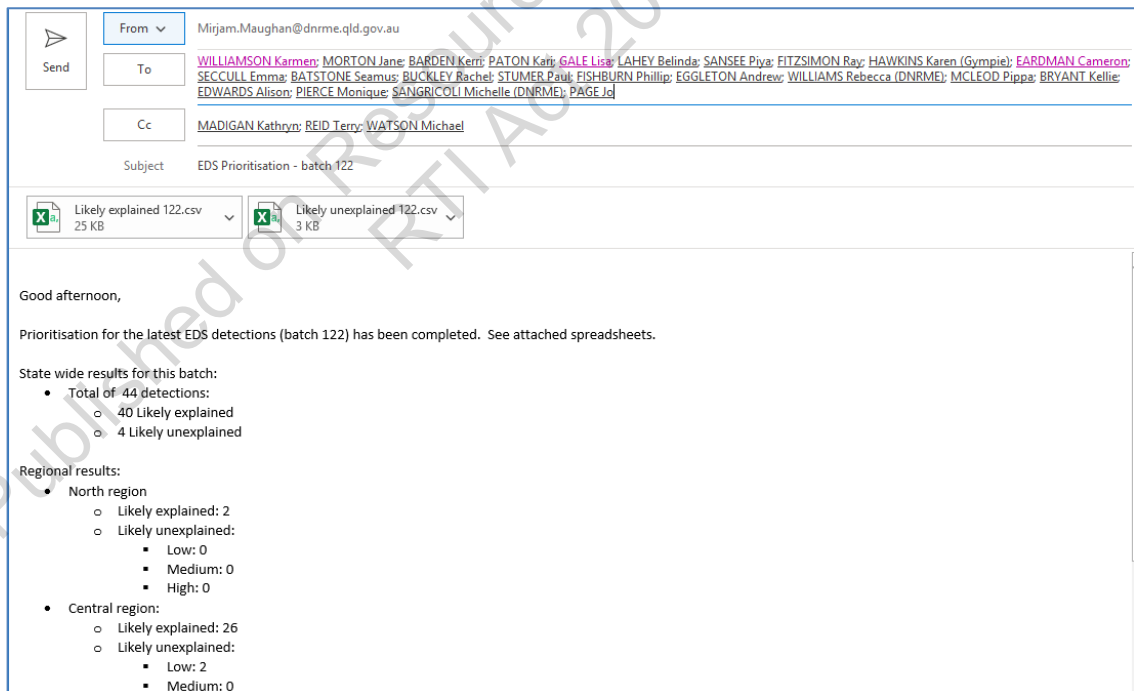

Image 32. Example email to send to EDS Hub team

EDS Governance – Roles and Responsibilities, V1.00 03/10/2018

## Approval

Position	Business Group	Date
Executive Director	Divisional Support	12 September 2018
Director	Divisional Support	14 January 2020
Director	Divisional Support	10 December 2020

## Version history

Version	Effective Date	Comments
1.00	12/09/2018	EDS prioritisation procedure
1.01		Update using the EDS Feature Service (3 Tabs), addition of EDS co-ordinator role, CIRaM reporting requirements, sending letters and making EDS maps. Due to organisational structural change an update has been made to the business unit in the approval text box.
1.02	14/01/2020	Update EDS coordinator role, ESRI Sentinel2 tab toolbar options and update additional filter tools to both EDS feature service tools
1.03	10/12/2020	Update to the procedure to include current EDS and CIRaM screenshots, further information to clarify process steps, ensure consistency and avoid commonly made errors (including multiple lot detections, previous detections, ADVCC notifications, batch attribute editor fields and fields to check in CIRaM). Guidance also has been updated to reflect how assessed clearing size is to be recorded if smaller or larger than system detected changes. Instructions for how to create a map has been removed from the procedure as this process does not specifically relate to prioritising EDS detections.

## Attachment A – EDS desktop assessment

### 1. Are the EDS polygons identified on the correct lot on plan/s?

- No: Record correct lot/plan details. Contact LSI to correct lot/plan details in EDS data. Note that the QVAS lot/plan description may be different where it relates to the contact address for a property with multiple lots.
- Yes: proceed with checks

### 2. Check vegetation category and status (endangered/of concern/least concern).

- If all category X area: categorise detection as 'likely explained' in the *Assessment Code* field in Batch Attribute Editor. Record relevant details (see Section 7.6) and no further prioritisation is required. Note: Category X areas should have been automatically filtered out. If you do encounter an EDS polygon over a category X area notify LSI of the error.
- If you have drawn in a larger area in *desktop detected changes*, make note if a different/higher vegetation category or status is found.
- Proceed with checks.

### 3. Is the lot on plan greater than [sch3] in area?

- No: select 'Lot under [sch3] in the *Assessment Code* field. This case is now likely explained. Complete the fields specified in Section 7.6. and no further prioritisation is required.
- Yes: proceed with checks.

### 4. Is the lot a tenure to which the VMA does not apply (e.g. state forest/national park/commonwealth land etc.)?

You can find tenure in the "not yet prioritised" spreadsheet, and through a SMIS search.

- Yes: select 'Non VMA Tenure' in the *Assessment Code* field. This case is now likely explained. Complete the fields specified in Section 7.6. and no further prioritisation is required.
- No: proceed with checks.

### 5. Is the lot subject to mining or petroleum tenement?

Check the exploration permit and mining permit layer in EDS. If lot is subject to a permit, check imagery to ensure detected changes appear consistent with mining/petroleum activities.

- If yes and the clearing looks like it is associated with mining, select 'Likely mining activity' in the *Assessment Code* field. The case is now likely explained. Complete the fields specified in Section 7.6, and no further prioritisation is required.
- If no, if unsure if the clearing is allowed under exploration permit, or if the clearing is not mining related: proceed with checks.

### 6. Does the detected polygon meet the minimum area thresholds as per the EDS System specifications? Area thresholds applied in EDS:

Vegetation Status	Reef/Coastal LGA (see Attachment C to determine Coastal LGA)	Non-coastal LGA (see Attachment C to determine Non-coastal LGA)
Least concern	[sch3] or greater	[sch3] or greater
Of concern	[sch3] or greater	[sch3] or greater
Endangered	[sch3] or greater	[sch3] or greater

- If No, select 'under area threshold' in the *Assessment Code* field. The case is now likely explained. Complete the fields specified in Section 7.6, no further prioritisation is required.
- Yes: proceed with checks.

## 7. Is a change in vegetation canopy cover evident, and is it clearing, from imagery interpretation?

Check Landsat, then LSI Sentinel, then ESRI Sentinel or Planet if necessary, to check if trees are present before and after 'change' (the change could be grass discolouration or shedding of leaves). Consider the type of clearing e.g. broadscale or managing thickened veg/weeds/fodder harvesting.

- If No, select 'no clearing on subject lot' in the *Assessment Code* field. The case is now likely explained. Complete the fields specified in Section 7.6 and no further prioritisation is required.
- If Yes – proceed with checks.

## 8. Are there any previous detections on the lot?

Check the "previous changes" in both the system detected and desktop detected change datasets. If there are previous detections, you will need to check whether the current detection is over the exact same area as the previous detection and the timing of the previous detection (using the  tool).

- If the area is over the same area as a recent detected change, select 'same area as previous detection' in the *Assessment Code* field. The case is now likely explained. Complete the fields specified in Section 7.6, no further prioritisation is required.
- If a letter has been sent out about the previous clearing, and the landholder has cleared an adjacent area or recleared the area, make note of this in the comments section and continue with checks.
- If there are no previous detections on the lot, continue with checks.

## 9. Does change in vegetation cover appear consistent with an exemption prescribed under Schedule 21 of the Planning Regulation 2017? Is it an unregulated grassland according to the Vegetation Management Regulation 2012?

- If Yes, then select 'likely explained' in the *Assessment Code* field. Complete the fields specified in Section 7.6 and no further prioritisation is required.
- If No: proceed with checks

## 10. Identify any previous cases with actions in CIRaM

Search property lot/plans in CIRaM (include closed cases), search landholder name in SMIS, enter landholder name in free text. Note any previous actions taken against the entities or applicable to the property to inform the previous compliance history criteria.

- If actions were taken: Record details in *Existing CIRaM* field, taking note for what area the action was taken, and include who the incident/s are assigned to if a current investigation is underway.
- No previous actions: in *Existing CIRaM* field, record 'nil' or 'expired cases only'.

## 11. Check eLVAS for cases and interaction records

Check cases and interactions that relate to the property and landholder. If this reveals a valid PMAV, development approval, AMP notification or discussion around exemptions, check if they applied at the time of the clearing and check the conditions.

- If eLVAS case(s) or interaction(s) are found:
  - Record relevant details in *eLVAS cases* and/or *Rel Client Interactions* fields, with the reference number, date of record and a short summary.
- If the eLVAS case(s) or interaction(s) explains the clearing:
  - Select 'likely explained' in *Assessment code* field.
  - Complete the fields specified in Section 7.6 and no further prioritisation is required.
- If no eLVAS cases or interactions are found:
  - Search the Lot/Plan in SMIS and click *Retrieve Plan Image* to check if/when the plan last changed.
  - If there was a recent change: take note of the cancelled lot/plan number and use this in eLVAS (and CIRaM) search.
- If there are still no eLVAS cases or interactions, or they do not explain the observed change, proceed with checks.

## 12. Check for Council approvals and zoning where relevant

This predominantly applies to smaller non-rural lots (e.g. urban area/urban purpose exemption).

- If a valid approval or exemption exists, then:
  - Enter details in *Council Approval* or *Zoning* field.
  - Select 'likely explained' in the *Assessment Code* field. Complete the fields specified in Section 7.6 and no further prioritisation is required.
- If None: proceed with checks

## 13. Check departmental databases for self-assessable vegetation clearing code notifications which may explain the detected change/s.

From imagery interpretation does the change appear consistent with the permit, ADVCC conditions, or practices? Is the authorisation still current? Is the RE listed in the ADVCC (fodder, NFP)?

- Enter details in *SAVCC Notification* field, including reference number, date, purpose, size of area notified for and/or RE applicable.
- If Yes, select 'likely explained' in the *Assessment Code* field. Complete the fields specified in Section 7.6 and no further prioritisation is required. Select *Audit\_Candidate* = "true".
- If No: detection is categorised as 'likely unexplained' and will be prioritised according to **Attachment C** in EDS.

## 14. Perform any additional searches (if relevant) that help explain the change

- Look up the RE in the [Regional Ecosystem Description Database](#):
  - is the change the drying or filling up of a wetland?
  - is it naturally very sparse?
- A fire database search: is the change the result of a wildfire or fuel load reduction?
  - North and Central Queensland: check [NAFI](#)
  - Australia wide, last 2 years: <https://myfirewatch.landgate.wa.gov.au/map.html>
- [The Long Paddock](#): check if the area has been drought declared.
- Geology on Queensland Globe (click on layers, add layers, expand geoscientific information, add 'geology'): rocks that contain a lot of crystal reflect white when grass layer disappears.

Datasets available for display in EDS feature service	
Dataset	Used for
Desktop detected changes	Additional areas detected by EDS Hub staff. The system detected change might overlap with an earlier staff detection.
System detected changes	Latest detected changes is the layer that requires prioritising.
Land parcel information	Check if the detection is on one lot/plan, or if the clearing also involves the neighbour (the centroid of the detection is used to link with lot/plan).
Tenure	Helps to identify which exemptions apply.
Local Government Areas	Helps to identify which zoning plan applies.
State development areas	Clearing could be excluded development under Planning Regulation 2017.
Priority development areas	
Key resources	
Mines: Exploration & production permits	
Forest Quarry	
Flora survey trigger map	Helps to inform us if we should refer the clearing to the DES.
Nature refuges	
Koala Plan	
DAFF forest products	Helps to inform us if we should refer the clearing to the DAFF.
SLATS 1988-2018	To check if there was a previous compliance case on the property. Note that not all SLATS cases resulted in a compliance case.
Coastal and non-coastal reef	Helps to identify if the area is coastal or non-coastal for prioritisation purposes.

## Attachment B – Guide to entering data into Batch Attribute Editor fields

Attribute Editor Field	Automatic infill (yes/no)	Information	Required action
VEG_STATUS	Yes	<ul style="list-style-type: none"> <li>A drop-down list provides a range of status combinations.</li> <li>The vegetation status score is based on the highest RE VM status impacted within the detected area.</li> </ul>	<ul style="list-style-type: none"> <li>If more than EDS detection polygon has been cleared: check the VM regional ecosystem map to identify the highest VM status of REs within the detected area.</li> <li>Select applicable status option.</li> </ul>
VEG_CATEGORY	Yes	<ul style="list-style-type: none"> <li>A drop-down list provides a range of category combinations.</li> <li>The score is based on the highest category identified within the detected area where A is the highest, followed by B, R, C and X for matters where multiple categories have been impacted.</li> </ul>	<ul style="list-style-type: none"> <li>If more than EDS detection polygon has been cleared: check the RVM map to identify the highest category within the detected area.</li> <li>Select applicable category option.</li> </ul>
COUNCIL_APPROVAL	No	Council development approvals may be applicable if the EDS detection is in an urban area.	<ul style="list-style-type: none"> <li>Only required if this makes case explained.</li> <li>Search LGA PD online where available.</li> <li>Record any relevant application details.</li> <li>Record N/A if applicable.</li> </ul>
eLVAS_CASES	No	Allows relevant eLVAS cases to be identified.	<ul style="list-style-type: none"> <li>Record any relevant case details including reference number, case type and relevance to detection.</li> <li>Record Nil if applicable.</li> </ul>
SAVCC_NOTIFICATION	No	Allows relevant ADVCC notifications to be identified.	<ul style="list-style-type: none"> <li>Search OSACN.</li> <li>Record relevant ADVCC notification information (e.g. date, reference and purpose).</li> <li>Record if notification is still current</li> <li>Record Nil if applicable.</li> </ul>
REL_CLIENT_INTERACTIONS	No	<p>Allows relevant client interactions from eLVAS to be flagged.</p> <p>Discussions about exemptions or codes could explain imagery observations but could also raise flags where our advice was not followed.</p>	<ul style="list-style-type: none"> <li>Not required when clearing is already explained.</li> <li>Search eLVAS interactions.</li> <li>Record any relevant interactions, including date, topic and reference number.</li> <li>Record Nil if applicable.</li> </ul>
ZONING	No	<p>Allows zoning to be recorded.</p> <p>Is relevant if lot is in an urban area or other designation (i.e. PDA) that facilitates exempt development.</p>	<ul style="list-style-type: none"> <li>Only required if the zoning makes case explained.</li> <li>Search Local zoning plans.</li> <li>Record if lot is in urban or other relevant designation, otherwise enter N/A.</li> </ul>

Attribute Editor Field	Automatic infill (yes/no)	Information	Required action
EXISTING_CIRAM	No	Allows <u>relevant</u> CIRaM cases to be identified. Expired cases that were not dealt with, or cases dealt with through broad education scheme are not relevant.	<ul style="list-style-type: none"> <li>• Not required when clearing is explained.</li> <li>• Record if there are any previous detections/notifications/cases in CIRAM.</li> <li>• Identify the status of the cases and note if any compliance action was taken.</li> <li>• If there are any active cases identify who the cases are assigned to.</li> </ul>
COMMENTS	No	<p>Observations only. Summarise observation of imagery and any changes to clearing area.</p> <p>When this field is imported into CIRaM, it is combined with the text in “EDS Hub Assessment” and appears in the CIRaM field “EDS Hub Assessment”.</p>	<p>Provide a summary of observations, including:</p> <ul style="list-style-type: none"> <li>• Date range when clearing occurred.</li> <li>• Imagery source (Landsat, Sentinel, Planet etc.)</li> <li>• A description of the changes observed (linear, thinning, broad scale).</li> <li>• Any change observed outside of the detected area and any other relevant observations.</li> <li>• Where applicable mention RE if encroachment/NFP can occur, or if area is an unregulated grassland.</li> <li>• Record details of the assessed total clearing size, and whether there is an increase or decrease of the detected clearing area.</li> <li>• Record details of any adjustments to scoring.</li> </ul>
EDS_HUB_OFFICER	Yes	Allows hub prioritising officer to be identified.	Check and change to your name if required.
APPROVED_BY_EXECUTIVE	No	<ul style="list-style-type: none"> <li>• A drop-down list provides either yes, no or no value options.</li> <li>• Used when there is ministerial and media interest, multiple public complaints.</li> <li>• This will typically be a no response for EDS matters at the prioritisation stage.</li> </ul>	<ul style="list-style-type: none"> <li>• Not required when clearing is explained.</li> <li>• Select no unless directed via appropriate written communication.</li> <li>• A ‘Yes’ outcome requires a direction from the Regional Executive Director or Regional Manager.</li> </ul>

Attribute Editor Field	Automatic infill (yes/no)	Information	Required action
PREVIOUS_COMPLIANCE_HISTORY	No	<ul style="list-style-type: none"> <li>• A drop-down list provides 6 options for previous compliance history (see <b>Attachment C</b>).</li> <li>• Previous action is to be used in circumstances where previous vegetation related actions have occurred on the property, or by the landowner regardless of the location.</li> <li>• Previous unexplained EDS detections does not include explained EDS detections.</li> <li>• Unexplained EDS detections can be identified by searching CIRaM.</li> </ul>	<ul style="list-style-type: none"> <li>• Not required when clearing is explained.</li> <li>• Check CIRaM for open and closed cases relating to the property and the landowner.</li> <li>• Include recent non-EDS compliance cases that resulted in an action.</li> <li>• Cases that expired or no action was undertaken (e.g. some low SLATS cases) should not be counted towards previous compliance history.</li> <li>• Use the Free Text Search in CIRaM when searching the landowner name.</li> <li>• Select the applicable option.</li> </ul>
EDS_HUB_ASSESSMENT	No	<p>Your interpretation of the comments and other fields combined. Summarise any assessment findings to explain why a detection is explained or unexplained.</p> <p>There is no need to repeat text from the <i>Comments</i> field here, since CIRaM combines the <i>Comments</i> field text with this field. The combined text appears in the CIRaM field "EDS Hub Assessment".</p>	<ul style="list-style-type: none"> <li>• Provide summary of assessment findings that explains the assessment code.</li> <li>• Consider fire scars, flooding, drought.</li> <li>• Consider permit, notification, or exemptions.</li> <li>• If a repeat detection, include information about any previous response e.g. Standard letter sent, case ongoing and responsible officer. This will assist with the allocation of follow-up cases.</li> </ul>
EDS_HUB_PROPOSED_ACT	No	<p>Drop down list of the following options:</p> <ul style="list-style-type: none"> <li>• Letter Only</li> <li>• Contact required</li> <li>• Further investigation</li> <li>• Audit/inspection</li> <li>• Link and close as duplicate notification</li> <li>• No further action</li> </ul>	<p>Choose action from drop down menu based on priority outcome. Choose <i>No further action</i> if case is explained. Medium cases are vetted to be treated like a Low or High</p> <ul style="list-style-type: none"> <li>• Low and vetted Medium = Letter only.</li> <li>• Low with Sustained works = Contact required.</li> <li>• High and vetted Medium = Contact required or Further investigation required.</li> </ul>

Attribute Editor Field	Automatic infill (yes/no)	Information	Required action
ASSESSMENT_CODE	No	Drop down list of the following options: <ul style="list-style-type: none"> <li>Likely unexplained</li> </ul> Likely explained includes: <ul style="list-style-type: none"> <li>No clearing on subject lot</li> <li>Under area threshold</li> <li>Likely mining activity</li> <li>Same area as previous detection / already contacted in relation to area/s</li> <li>Non VMA Tenure</li> <li>Lot under <span style="border: 1px solid red; padding: 0 2px;">sch3</span>(</li> <li>Likely explained</li> <li>Other than likely unexplained</li> </ul>	Choose appropriate option from drop down list.
PRIORITY_DESCRIPTION	No	Priority based on total score: <ul style="list-style-type: none"> <li>Low 0-110</li> <li>Medium 120-160</li> <li>High 170+</li> </ul>	Choose N/A if clearing is explained. Select the priority based on total score and adjustments made as part of the desktop assessment.
AUDIT_CANDIDATE	No	<ul style="list-style-type: none"> <li>True/False options.</li> <li>Is used to flag detections which are <u>explained</u>, where clearing has occurred, and a current ADVCC notification exists.</li> <li>This is not used for reporting purposes.</li> <li>This may be used by regions to identify ADVCC audits where clearing has started.</li> </ul>	<ul style="list-style-type: none"> <li>Not required when clearing is unexplained.</li> <li>Select TRUE if cover change is explained, clearing has occurred, and current ADVCC notification exists.</li> <li>If clearing looks beyond what is allowed in ADVCCs, the case should be unexplained.</li> </ul>

## Attachment C – Guide to CIRaM criteria and scores for vegetation matters

**Approved by Regional Executive Director/Regional Manager**  
(includes public interest/departmental reputation risk considerations)

Yes	200
No	0
Unknown	0

Use yes if there is a direction to investigate a matter from either the Executive Director (ED) or Regional Manager (RM), otherwise use no or unknown. This criterion can consider factors such as ministerial and media interest, multiple public complaints etc.

### Vegetation Category

A	60
B	30
R	30
C	10
X	0
Unknown	0

Use the highest category impacted where A is the highest, followed by B, R, C and X for matters where multiple category areas have been impacted.

### Clearing Size (Ha)

sch3(10)(1)(f) Prejudice to effectiveness of method of invest

Identify and apply the total area affected for detections including multiple areas.

### Vegetation Status

Endangered	40
Of Concern	20
Least Concern	10
Unknown	0

Use the highest RE (VM) status impacted where endangered is the highest, followed by of concern and least concern where multiple RE's with different status have been impacted.  
Preclear mapping (available on Qld Globe) can be used when prioritising category X areas on state land (i.e. USL, roads).

### Location by Council\*

Coastal & Reef	30
Non-coastal	10
Unknown	0

### Previous Compliance History

Previous action (prosecution)	200
Previous action (VMA 20B PMAV, restoration notice, PIN, stop work notice, enforcement notice, warning notice)	80
2 or more unexplained (EDS) detections, or advisory letters	60
1 previous unexplained (EDS) detection, or advisory letters	40
No previous unexplained (EDS) detections or action	0
Unknown	0

Previous action is to be used in circumstances where previous vegetation related actions have occurred on the land affected or have previously been applied to the land owner regardless of the location.  
Unexplained EDS detections have CIRaM cases created and can be identified by searching CIRaM.

### Total Score

170 +	High
120-160	Medium
0-110	Low

### Priority

### Changing the criteria

Note: the prioritisation criteria can be updated in CIRaM if additional information becomes available. E.g. the clearing size criteria can be changed if evidence (permits, additional clearing on imagery) presents itself after the initial prioritisation.

### \*Coastal/Reef Local Government areas:

North	Central	South
Lockhart River	Whitsunday	Bundaberg
Cook	Mackay	Fraser Coast
Hope Vale	Isaac	Gympie
Wujal Wujal	Livingstone	Noosa
Douglas	Rockhampton	Sunshine Cst
Mareeba	Gladstone	Somerset
Yarrabah	Banana	Moreton Bay
Cairns	Central Highlands	Brisbane
Tablelands		Redlands
Cassowary Cst		Gold Coast
Palm Island		Logan
Charters Towers		Ipswich
Hinchinbrook		Scenic Rim
Townsville		Lockyer Valley
Burdekin		Toowoomba
		South Burnett
		Cherbourg
	North Burnett	

Non-coastal includes all other LGAs. Use coastal/reef if a detection occurs on a property that is both coastal/reef and non-coastal.

## **EDS governance framework**

### **Roles and responsibilities**

**12 November 2021**

Published on Resources Disclosure Log  
RTI Act 2009

## Purpose

This governance framework outlines how the department's business areas collaborate to undertake the Early Detection System (EDS) process. The purpose of this document is to outline the roles and responsibilities for each of the key contributors to:

- inform appropriate decision making
- ensure data and systems are maintained in accordance with the governance framework
- ensure appropriate decision making about the EDS data
- ensure systems are maintained in accordance with the agreed responsibilities

This framework further supports transparency and documentation of any changes made, particularly in relation to future reporting and trends analysis.

## About EDS

EDS analyses satellite imagery on a regular basis to detect recent changes in regulated vegetation across the state.

The department uses the EDS information to cross-reference it with data about exemptions, current notifications and clearing approvals to help identify unexplained clearing of native vegetation.

Rapidly detecting recent changes in native vegetation enables a proactive response and early engagement with landholders.

Timely response to potentially unlawful clearing events and providing landholders with information around their vegetation management requirements, reduces further clearing activities and impacts to native vegetation.

## Governance framework

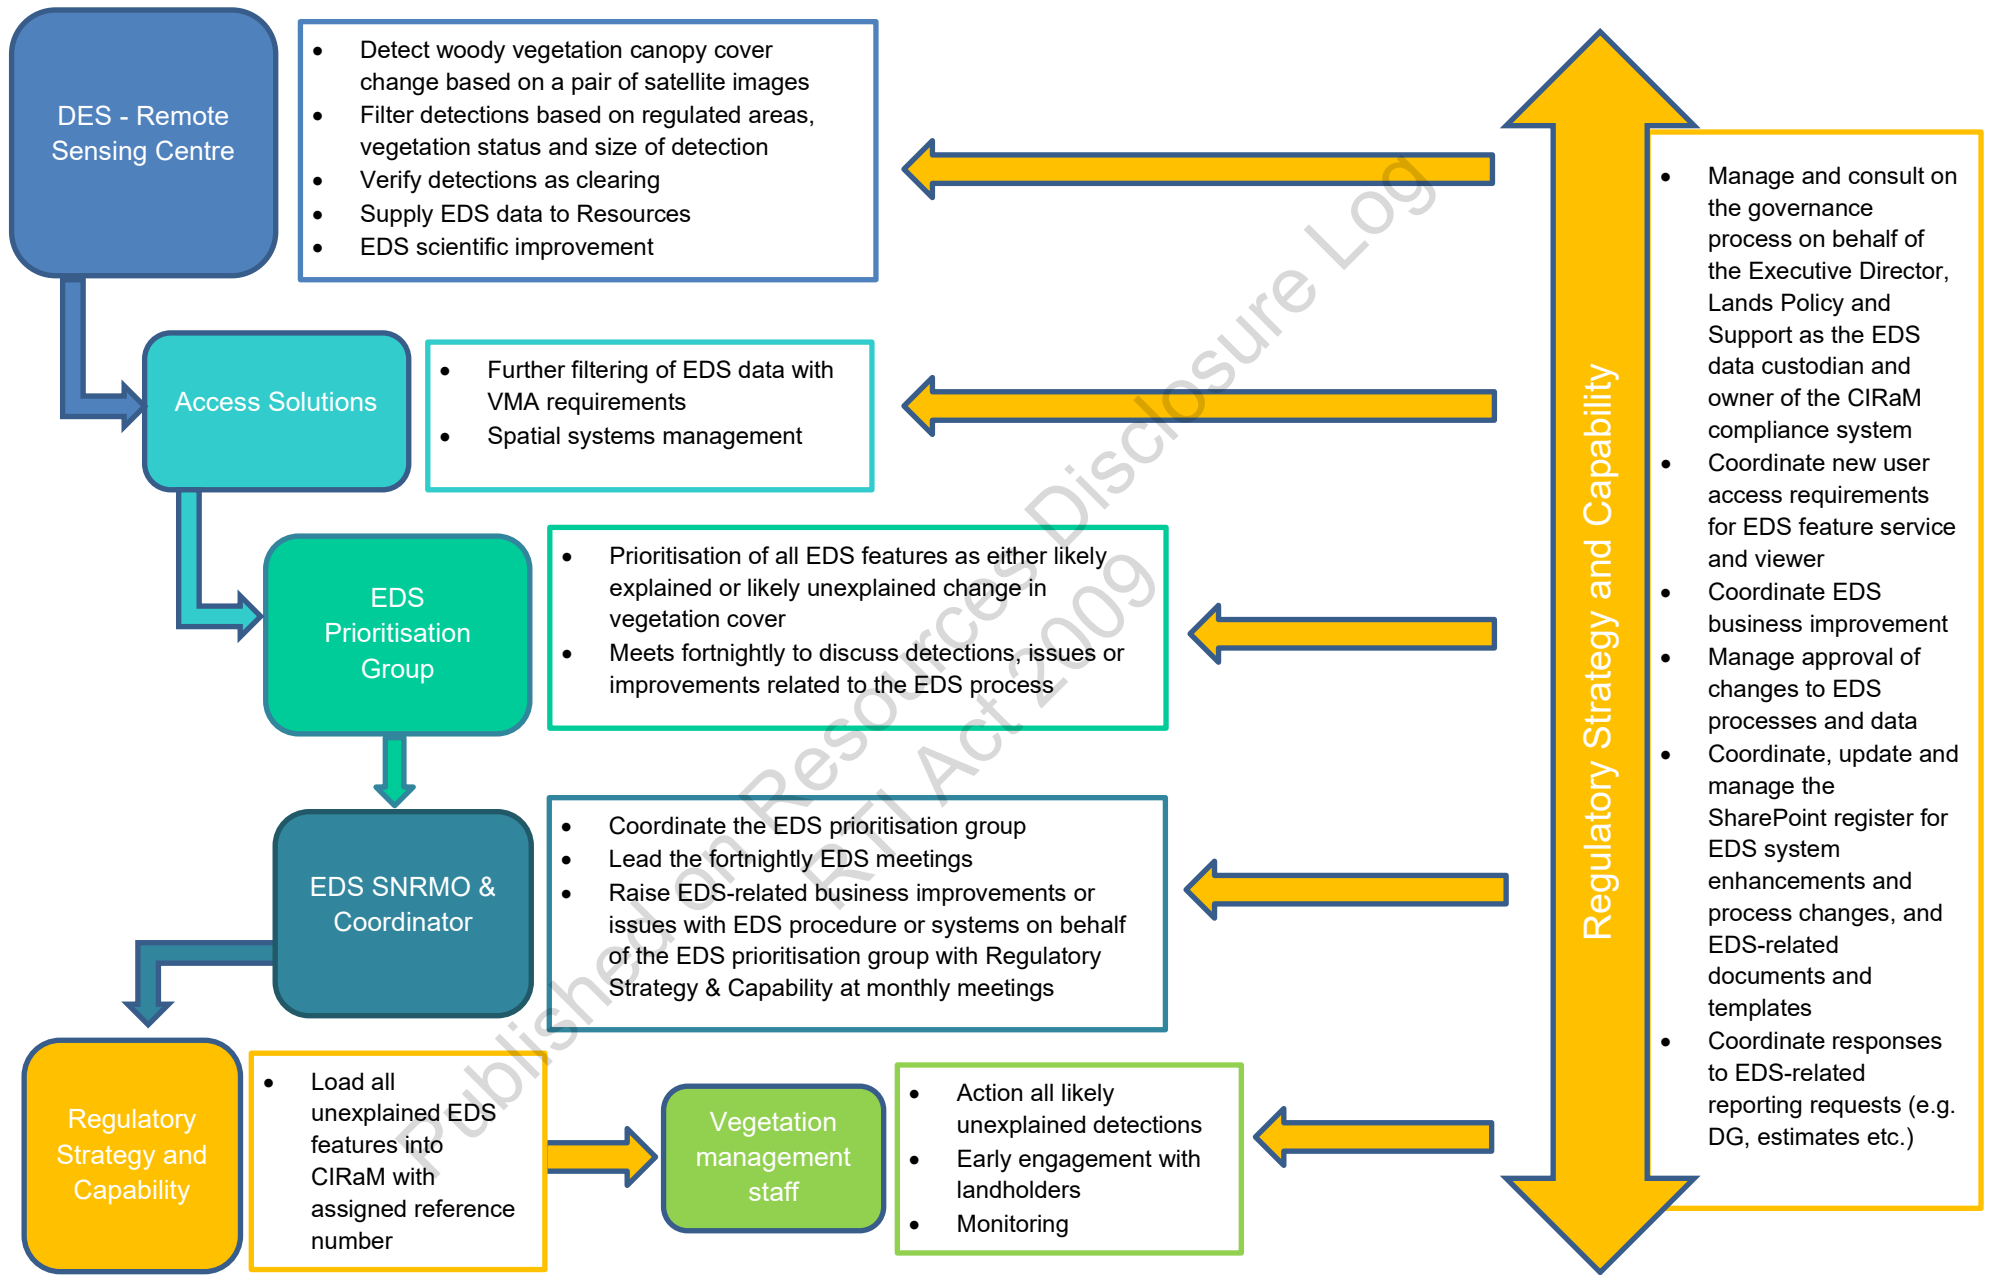

The EDS process is a collaborative effort, involving the following key contributors:

- Department of Environment and Science's (DES)
  - Remote Sensing Centre
- Department of Resources
  - Access Solutions team in Systems and Information Access
  - Regulatory Strategy and Capability (RS&C)
  - EDS Prioritisation Group
  - EDS Senior Natural Resource Management Officer (SNRMO) and Coordinator
  - Vegetation management staff

The Executive Director, Lands Policy and Support is the data custodian for EDS and is responsible for any changes or updates to the system and the use of data within the system. RS&C manage elements of the EDS process and governance on behalf of the data custodian.

Figure 1 shows the structure of the EDS governance framework for each of the involved contributors. Table 1 and Table 2 outline the roles and responsibilities for each contributor.

**Figure 1: EDS governance structure – roles and responsibilities**

**Table 1: EDS roles and responsibilities for Remote Sensing Centre, Access Solutions and Regulatory Strategy and Capability**

	DES - Remote Sensing Centre	Access Solutions	Regulatory Strategy and Capability
Role	<p>Supply Department of Resources with EDS detections every 10 working days as a spatial data file with each polygon attributed with the dates of the image pairs used to assess change.</p> <p>EDS scientific improvements.</p>	<p>Further analysis of EDS features and provide features to EDS Prioritisation Group fortnightly within 2 business days.</p> <p>Development and maintenance of Veg Viewer Application for EDS features.</p> <p>Processing of satellite imagery for EDS application use.</p>	<p>Lead, coordinate and provide EDS advice, support, and EDS business improvement.</p> <p>Responsible for coordination of EDS reporting requirements.</p> <p>Manages governance process on behalf of the custodian of data and CIRaM administration.</p>
Responsibilities	<p>Download and process satellite imagery daily.</p> <p>Processing of satellite imagery includes:</p> <ol style="list-style-type: none"> <li>Applying radiometric and atmospheric corrections, cloud, cloud shadow, topographic shadow and water masks.</li> <li>Apply woody vegetation clearing index to image pairs and retain detections with high likelihood of woody vegetation change.</li> <li>Apply a mask to remove RVM Category X areas, exempt grassland RE, protected areas and land tenures to which the VMA does not apply.</li> <li>Assess detections for size based on regional ecosystem vegetation status and locality (coastal and inland).</li> <li>Apply spatial filters to minimise re-assessment of recent reported detections.</li> </ol> <p>Rapid manual assessment of vegetation change by two scientists to eliminate false positives and verify detection is due to vegetation clearing.</p> <p>Reporting includes:</p> <ul style="list-style-type: none"> <li>Fortnightly reporting to SI/Access Solutions: clearing detections</li> <li>Quarterly reporting to SI/Access Solutions: Statistics on number of image scenes available to process, number of image scenes with cloud cover, number of scenes assessed, number of scenes with too many detections to assess, number of scenes with no detected change.</li> </ul> <p>Provide timely system updates when authoritative vegetation management data sets (e.g. RVM and RE maps) are updated as directed by RS&amp;C.</p> <p>In the event of satellite failure or limited access to available imagery, DES will investigate and report delays to RS&amp;C.</p> <p>DES to communicate to RS&amp;C, any situations in which EDS processing is to be delayed (e.g. due to resourcing realignments during natural disaster events).</p>	<p>Further analyse EDS data to remove linear areas which would be exempt (i.e. road reserves).</p> <p>Report batch statistics including:</p> <ol style="list-style-type: none"> <li>Scenes and Cloud Cover Statistics</li> <li>Number of scenes in this batch and all previous batches and whether they had cloud or not</li> <li>Area of land assessed and under cloud in this batch and all previous batches</li> <li>Polygons Cleared by VM Status Statistics</li> <li>Polygon count and area by VM Status in this batch</li> <li>Polygon count and area by VM Status in this batch and all previous batches</li> </ol> <p>To aid prioritisation of EDS cases:</p> <ol style="list-style-type: none"> <li>Develop database triggers by using Compliance Review Group (CRG) agreed compliance scoring systems to auto update EDS feature scores</li> <li>Inform EDS Prioritisation Group when EDS batch is available for prioritisation</li> <li>Manage EDS applications, access, user groups and services</li> <li>Research and development for continuous improvement of EDS Feature Service applications</li> </ol> <p>Provide technical assistance and advice.</p>	<p>Load all unexplained EDS features into CIRaM with assigned reference number.</p> <p>Escalate issues with CIRaM data quality to EDS SNRMO and coordinator.</p> <p>Work with the Vegetation Management teams to develop and update EDS documentation (i.e. operational guidelines and templates) as required/requested.</p> <p>Manage the EDS SharePoint site with up to date documents and registers and communicate accordingly.</p> <p>Coordinate, consult and communicate with DES, Access Solutions, Veg Spatial Support team and the Vegetation Management teams on any proposed changes to data management and systems prior to seeking endorsement from ED Land Policy (data custodian) once change request received.</p> <p>Coordinate and consult with DES, Access Solutions and the Vegetation Management teams on compliance data as requested from DG/DDG/media etc.</p> <p>Progresses new user access and existing user access requests to Access Solutions.</p> <p>Coordinate monthly meeting with EDS coordinators and representatives from the Vegetation Management teams, Access Solutions and others such as Titles and Veg Spatial Support as needed to discuss issues and business improvements.</p>

**Table 2: EDS roles and responsibilities defined for Vegetation Management teams**

	EDS Prioritisation Group	EDS SNRMO and Coordinator	Vegetation management staff
Role	Prioritisation and scoring of all EDS detections for each batch delivered to determine if change in vegetation cover change is likely explained or likely unexplained.	Coordinate the EDS prioritisation group and proposed changes to EDS documents, processes or system.	Action and management of all EDS cases in CIRaM Early engagement with landholders Further monitoring and compliance
Responsibilities	<p>Prioritisation of all EDS detections per batch by undertaking a preliminary desktop assessment and categorising each detection as either:</p> <ul style="list-style-type: none"> <li>Likely explained change in vegetation canopy cover</li> <li>Likely unexplained change in vegetation canopy cover</li> </ul> <p>Complete prioritisation, in accordance with the EDS Prioritisation Procedure.</p> <p>Raise system or procedural issues or proposed changes with the EDS SNRMO and Coordinator to facilitate the timely escalation of issues and to inform the completion of a formal change request.</p> <p>Identify, facilitate and work with RS&amp;C in the updating, development and creation of EDS documentation.</p>	<p>Provide update to CIRaM admin once each batch is complete.</p> <p>Coordinates the EDS prioritisation group including allocating detections to relevant officers, preparing user access requests, assisting in resolving issues.</p> <p>Monitor CIRaM data quality in consultation with RS&amp;C to ensure accurate reporting.</p> <p>Coordinates EDS Prioritisation Group fortnightly meetings to discuss detections.</p> <p>Ensure all EDS related timeframes are met in accordance with the EDS prioritisation procedure. Assists RS&amp;C with EDS reporting, input and attendance at monthly meeting to raise and discuss issues and business improvements on behalf of the EDS prioritisation group with RS&amp;C at monthly meetings</p> <p>Coordinates proposed changes from the EDS Prioritisation Group or NR Assessment staff in the required email template and seeks approval from the Vegetation Management Manager (AO8) prior to providing change request to RS&amp;C.</p> <p>Identify, facilitate and work with RS&amp;C in the updating, development and creation of EDS documentation.</p>	<p>Assist EDS coordinators with input and attendance to EDS Prioritisation Group discussions.</p> <p>Identify, facilitate and work with RS&amp;C in the updating, development and creation of EDS documentation.</p> <p>Ensure all EDS related timeframes are met in accordance with the EDS Prioritisation Procedure.</p> <p>Ensure CIRaM data management is completed for all EDS cases.</p>
