**Questionnaire:** Specify visitor type **tour participant**

Did they receive an information pack with their permits **No**

Did they read the Dingo Brochure **Unknown**

Did the people follow 'dingo safe' messaging? (Ranger to assess) **Yes**

Comments **Dingo safety messages were relayed to passengers during the tour the previous day. Dingo brochures are not available to CTO passengers only the small flyer if it is handed out.**

[sch4p3] **stayed calm and did not run from the dingoes. She let them move on before attempting to return to the resort.**

**Detailed report of events:** Ranger 7026804 received a phone call at the Eurong office from the Eurong resort manager at approx. 13:45 who stated that a client had been bitten by a dingo and he had photographs of the injuries sustained.

The message was forwarded to 7026466 who replied to the resort manager at 14:00. [sch4p3] (manager) advised that an Asian tourist who is currently on one of their busses had an interaction with a dingo earlier that morning and was scratched. He had no further information. The bus was to return to Eurong at around 15:00 and was to leave again, with her aboard, at 16:00 to go to the mainland.

At 15:00 rangers 7026466 and 7026804 went to Eurong and interviewed [sch4p3( 3) Prejudice] from Japan.

[sch4p3] stated she was taking photos of the sunrise at the waters edge on the eastern beach on her own. She turned around to see three dingoes (2 large and 1 small) directly behind her. One of the big dingoes tried to bite her flapping skirt. Although [sch4p3] (though it was probably trying to play, she felt intimidated and attempted to shoo it off and was firmly saying "go away". The dingo tried to bite/nip at her skirt again and grazed her thigh with its teeth. The other two dingoes were also in close proximity, starting to circle her and prevented her from going anywhere but the water.

[sch4p3] retreated calmly into the water until it was waist high. The two larger dingoes swam out to her. She then retreated deeper and the dingoes lost interest and returned to the beach.

When [sch4p3] saw the dingoes move on she attempted to come out of the water and return to the resort. The dingoes saw her and returned, again attempting to nip at her skirt that was now wet, clinging to her and not flapping. [sch4p3] stayed calm and carried her thongs (footwear) to potentially use if attacked while returning to the Eurong Resort grid area. The dingoes followed in close proximity until [sch4p3] entered the pedestrian gate. Once inside the gate, the dingoes left.

The animals were identified through a series of photographs taken by the person involved in the interaction [sch4p3( 3) Pr] Photographs shown below.

**Additional comments and notes:** The dingo responsible for causing the injury was not identified.

The Assistance manager initially dealt with the situation earlier and was not sure what to do so waited for [sch4p3] to arrive on island before QPWS was called.

[sch4p3] is larger than the average female Asian tourist and acted in a calm and mature manner. She commented that she is from a province in Japan that required similar safety messages for bears - stay calm and don't run so she applied these to her situation.

Dangerous dingo signage is already erected in this area for the previous interactions from PuWW12m.

**Action taken:** Incident reported immediately to AM, SR and SCO. Follow up report occurred via phone messages. Extra patrols have been undertaken with particular focus on joggers and lone beach walkers. Draft interaction report completed and sent for comment.

**Proposed further action:** Continue dingo education briefings in this area. A dingo education talk will be conducted for Eurong resort staff. QPWS Management to assess risk situation.

**Faxed/emailed date: 10 January 2014**

**Reporting Officers details: 7026466**

Photograph RYY07m June 2013  
 Wongai CZ QPWS staff.

RYY07m 9/1/14 [sch4p3( 3) Prej]

**Photo 9, 10 and 11.**  
 RYY07m has a distinctive 'C'-shaped scar over his right eye and healed facial wounds.  
 This dingo has a small tail tip.  
 RYY07m RFF has a low sock that extends above the dew claw in a curved manner as pictured.  
 The LFF sock has low markings with a curve towards the junction above the outer two toes and the inner sock edge rises above the outer edge.  
 The angle of this dingo's ear seems to be obscuring the tag. Tag shadow can be seen in picture #8.  
 The angle of the ear may have also reduced the flop he mysteriously acquired 30/6/13. This dingo has been tagged since 3/12/08.  
 Please note winter coat to summer coat differences.  
 Other photographs available if requested.

Did they read the Dingo Brochure **Unknown**

Did the people follow 'dingo safe' messaging? (Ranger to assess) **Yes**

Comments **All food and rubbish was locked in the caged area on the back of his ute**

**Detailed report of events:** While sleeping in the open on a stretcher in a sleeping bag with his arms above his head, an unidentified dingo grabbed (mouthed) [sch4p3] on his elbow, at approximately 4am on the 16/2/14.

He swung his pillow at the dingo up to 6 times. The dingo was described as originally jumping back just out of the pillow's reach but staying around until [sch4p3] started yelling at it and eventually causing it to move on.

[sch4p3(3)] camping mate was in the back of a canopy covered ute and advised [sch4p3] there was a second smaller dingo at the foot of his stretcher as this was going on.

There was no injury to the camper

40 minutes later two dingoes came around the campsite where the campers were sitting. The larger dingo approached the camp directly and was yelled at and chased off while the smaller dingo hung back.

**Additional comments and notes:** Southern barge operator advised [sch4p3] to inform Rangers of the incident. [sch4p3] approached ranger 7027326 on the mainland and reported the interaction. [sch4p3(3) Prejudi] has given phone number and will be more than happy to give any further information.

[sch4p3] was contacted 18 February by Ranger 7026466 and provided further information for this interaction.

**Action taken:** Details taken from [sch4p3] Management notified and informed northern dingo ranger and Fraser Island Duty officer.

**Proposed further action:** Continue to patrol and brief visitors in this locality.

**Faxed/emailed date:** 17/2/14

**Reporting Officers details:** 7027326

<p>Date (of Interaction): <b>26/4/14</b>                  Location (of Interaction): <b>1km south of Yidney Rocks</b></p> <p><b>Question 1:</b> What were the actions of the dingo(s) during the Interaction? <i>(click on box(s) to check/uncheck)</i></p> <p><b>B) Habituated.</b></p> <p><input type="checkbox"/> not wary of humans  <input type="checkbox"/> moving through common areas to humans  <input type="checkbox"/> curious  <input type="checkbox"/> loitering at recognized visitor sites (no humans present)</p> <p><b>C) Nuisance or problem.</b></p> <p><input checked="" type="checkbox"/> loitering at recognized visitor sites (people nearby)  <input type="checkbox"/> stealing food or property (specify)</p> <p><input checked="" type="checkbox"/> soliciting food  <input type="checkbox"/> being fed or encouraged  <input type="checkbox"/> living under or in infrastructure  <input type="checkbox"/> following closely (distance)  <input type="checkbox"/> damaging property (specify)  <input type="checkbox"/> tent ripping (vacant campsite or tent)  <input type="checkbox"/> Entered dingo deterrent fence line</p> <p><b>D) Aggressive.</b></p> <p><input checked="" type="checkbox"/> growling/snarling  <input type="checkbox"/> dominant/submissive testing  <input type="checkbox"/> stalking  <input type="checkbox"/> tent ripping (campers inside tent)  <input type="checkbox"/> circling (distance)  <input checked="" type="checkbox"/> dominant towards humans  <input type="checkbox"/> incorporate humans into pack behaviour  <input type="checkbox"/> humans regarded as competitors for resources  <input type="checkbox"/> bailing up/ambushing (walking alone or unsupervised)  <input type="checkbox"/> hunting tactics (with intent to test a response)  <input type="checkbox"/> lunging (not attempting to nip or bite)</p> <p><b>E) Dangerous.</b></p> <p><input type="checkbox"/> nipping/biting  <input type="checkbox"/> attacking  <input type="checkbox"/> causing casualty  <input type="checkbox"/> hunting tactics (intent to attack)  <input type="checkbox"/> bailing up/ambushing (intent to attack)  <input checked="" type="checkbox"/> lunging (attempting to nip or bite)</p>	<p>Time (of Interaction 24hrs): <b>1100</b>                  Reporting Officer/s details: <b>7026936</b>                  Base: <b>Fraser Island</b></p> <p><b>Question 2:</b> How/why did the dingo(s) leave?</p> <p><input type="checkbox"/> voluntarily, for no apparent reason  <input type="checkbox"/> when yelled at  <input type="checkbox"/> when chased away  <input type="checkbox"/> when yelled at and chased away  <input type="checkbox"/> when person stopped moving/making a noise  <input checked="" type="checkbox"/> other (specify) <b>When person left in their vehicle</b></p> <p><b>Question 3: Dingo numbers and identification</b></p> <p>a. Did the people follow 'dingo safe' messaging? (Ranger to assess) **No**

Comments [sch4p3(3)] **should have defended himself with an object, as suggested in QPWS Fraser Island visitor guide and dingo brochure.** [sch4p3(3)] **felt he was not able to defend himself from the dingo as a CTO bus was observing the interaction. He was concerned that he would "end up in the paper" if someone photographed him striking the dingo.**

**Detailed report of events:** At 1100 on the 26/4/14 a professional wormer [sch4p3(3) Prejudice the] was working approximately 1km south of Yidney rocks. He was returning to his car at the water's edge when he was approached by a dingo. [sch4p3(3)] put his Burleigh bag in the tray of his ute as he knew that it attracts dingoes. As he was doing this he noticed that the dingo had "a mostly Green tag with Pink on it and it was in the dingo's right ear".

The dingo then started growling at [sch4p3(3)] and began lunging at him. Whilst trying not to be bitten by the dingo he noticed that a Kingfisher bay resort Bus was watching. [sch4p3(3)] said that "he didn't want to hit it while the bus was there because he might end up in the paper". [sch4p3(3)] kept his back to his ute as the dingo continued growling and lunging at him until he made it into the driver's side door. He then drove well away from the area to continue worming.

Released by [sch4p3(3)] under the RTI Act 2009

**Additional comments and notes:** Ranger 7026936 was observing two dingoes traverse south from Yidney rocks at 1100 on the 27/4/14 (day after interaction described). The two dingoes approached [sch4p3(3)] as he was worming the same area as the day before. [sch4p3(3)] stopped worming and returned to his vehicle. He then drove over to the ranger's vehicle and gave ranger 7026936 a description of the interaction on the 26/4/14. As [sch4p3(3)] was talking to the ranger the two dingoes traversed past both cars (within 2m). [sch4p3(3)] identified one of the dingoes to the ranger, as the dingo involved in the previous day's interaction. This dingo was clearly identified by the ranger as Green Green Pink 13 F, a Juvenile of the litter born near the Oaks (within 1km of interaction) in 2013.

GGPi13f has been involved in Three Threatening (Code D) interactions this month, April 2014.

[sch4p3(3)] has had many years' experience worming on Fraser Island and said this is the first time that he has felt threatened by a dingo.

**Action taken:** Notified through RIC & SR to RD. Notified Yidney rocks apartment managers. Interviewed and briefed [sch4p3] Dangerous dingo signs have been in place around Yidney rocks, Happy Valley and Camp zone entrances between Poyungan and Yidney rocks. GGPI13F is known to traverse between Poyungan rocks and Eli ck. All camp zones in this area (Poyungan rocks - Eli ck) are currently closed and dangerous dingo signs in place due to presence of dingo displaying Threatening and High risk behaviour, GBW11m (father to GGPI13f).

**Proposed further action:** Dangerous dingo signs will be installed at Eli ck and accommodation at the Oaks as soon as possible as GGPI13F is known to traverse these areas. Continue early and late patrols to the area, delivering dingo safety messages to families, fishermen and walkers. Continue close liaison with Yidney rocks accommodation managers and guests of the Oaks accommodation to ensure diligence with regard to dingo safety.

**Faxed/emailed date:** 27/04/14 **Reporting Officers details:** 7026936

**Questionnaire:** Specify visitor type **accommodation guest**

Did they receive an information pack with their permits **Yes**

Did they read the Dingo Brochure **Yes**

Did the people follow 'dingo safe' messaging? (Ranger to assess) **Yes**

Comments [sch4p3] **is a guest at Yidney rocks apartments. QPWS liaise regularly with the managers of these apartments, who are diligent in providing their guests with dingo safety messages.**

**Detailed report of events:** [sch4p3] was fishing 500m south of the Oaks at 1330 on the 27/4/14. He observed a dingo approach him within 5m. The dingo lay on the sand behind him after sniffing around for "a couple of minutes" and kept at a distance of 3m. He continued fishing, as he felt the dingo posed no threat. Shortly after taking his focus off the dingo, [sch4p3] was startled by something that touched the back of his thigh and saw the dingo biting his shorts. He quickly deterred the dingo and noticed that it had a "Green tag with a bit of Pink in the corner and it was in its right ear".

The dingo backed away after being deterred by [sch4p3] however continued to loiter roughly 5m from him for "a couple of minutes" until he left to return to his accommodation.

**Additional comments and notes:** The shorts [sch4p3] was wearing were not loose. For the dingo to have bitten the shorts [sch4p3] was wearing it has attempted to nip or bite [sch4p3] whilst he was not watching. This is justification for checking the 'Lunging' (Attempting to nip or bite) box, making this a Code E interaction. Although [sch4p3] did not see the dingo lunge at him, it has attempted to nip or bite him.

The eartag of the dingo identified by [sch4p3] fits the description of Green Green Pink 13 F, a Juvenile of the litter born near the Oaks (500m south of interaction) in 2013.

GGPi13f has been involved in Three Threatening (Code D) and One High risk (Code E) interactions this month, April 2014. The High risk interaction involving GGPi13f and a professional wormer on the 26/4 occurred within 200m of the above described interaction.

**Action taken:** Notified through RIC & SR to RD. Notified Yidney rocks apartment managers. Interviewed and briefed [sch4p3] Dangerous dingo signs have been in place around Yidney rocks, Happy Valley and

Camp zone entrances between Poyungan and Yidney rocks. GGPI13F is known to traverse between Poyungan rocks and Eli ck. All camp zones in this area (Poyungan rocks - Eli ck) are currently closed and dangerous dingo signs in place due to presence of dingo displaying Threatening and High risk behaviour, GBW11m (father to GGPI13f).

**Proposed further action:** Dangerous dingo signs will be installed at Eli ck and accommodation at the Oaks as soon as possible as GGPI13F is known to traverse these areas. Continue early and late patrols to the area, delivering dingo safety messages to families, fishermen and walkers. Continue close liaison with Yidney rocks accommodation managers and guests of the Oaks accommodation to ensure diligence with regard to dingo safety.

Comments **[sch4p3(3)] is a PhD student undertaking field work in relation to Fraser Island dingo behaviour**

**Detailed report of events:** Ranger 7028020 received a phone call from RIC NRM with a report of a possible Code E interaction reported by **[sch4p3(3)]** (PhD student) south of Eurong. Basic information reported was: **[sch4p3(3)]** had stopped to talk to 2 visitors who were not deterring 2 dingoes and taking photos, and when **[sch4p3(3)]** asked them to move on/get into their car was told they didn't have one. **[sch4p3(3)]** explained that the behaviour of the dingoes was not good and that the visitors should move on. During the conversation BWR13m came up behind **[sch4p3(3)]** and nipped at her.

7028020 attended the scene and interviewed **[sch4p3(3)]**

At approximately 16:30 **[sch4p3(3)]** was driving south along the beach around Wongai CZ when she noticed two people on the beach with two dingoes very close to them. She stopped to talk to the visitors as they were not deterring the dingoes and allowing them to get very close (crouching down) to take photos of them (**[sch4p3(3)]** has footage of this). The dingoes were sniffing at the clothes of the couple and were well within 1m of both visitors.

**[sch4p3(3)]** got out of her car and approached the couple and explained that she is a PhD student studying the dingoes and she recommended that they get into their car as the behaviour of the people and the dingoes was not appropriate. She was told that they had no car as they were dropped off by friends who went fishing.

As **[sch4p3(3)]** spoke with the couple BWR13m came around behind her and mouthed the back of her leg (top of her calf/back of her knee). The dingo did not break the skin or leave a mark but **[sch4p3(3)]** felt teeth on her leg.

At this point **[sch4p3(3)]** started walking towards her car at a normal pace, asking the couple to follow her. BWR13m mouthed the back of her leg 2 or 3 times more before she got into her car. As she was getting into her the couple came around the vehicle and continued to talk to her through the passenger window.

**[sch4p3(3)]** phoned RIC NRM to report the interaction and seek advice. As she was on the phone she noticed the couple walk back towards the water and talk to another 4WD that stopped. They then headed into Wongai CZ and she lost sight of them behind the dunes.

As **[sch4p3(3)]** finished the call she noticed that GY13m had approached a tent on the dunes and was sniffing around it, so she filmed the dingoes behaviour and saw the dingo rip into the tent (see separate Code C report). Just after the dingo had left the area the two visitors **[sch4p3(3)]** Preju appeared at the campsite, went into the tent and gathered some belongings before starting to pack up their campsite.

**[sch4p3(3)]** approached them to let them know that a ranger was coming down to talk to them about the dingoes and the dingo ripping into their tent. She then noticed that there was a 4WD at their campsite.

**Additional comments and notes:** 7028020 spoke with the visitors and was told they had had no problems with the dingoes - follow up phone call will be conducted and separate Code C reports written up from follow up interview and footage obtained from **[sch4p3(3)]**

**Action taken:** RIC NRM informed. Notified SR MUST, SR Fraser Island & Area Manager. Interviews conducted. Preliminary report generated and circulated.  
7028020 spoke to a group of fishermen nearby where one of the dingoes (no ID obtained) was loitering and gave them a dingo safe briefing.

**Proposed further action:** Follow up interviews conducted and report finalised. Continue monitoring behaviour of habituated animals in this area. Continue patrols around the area.

**Faxed/emailed date:** 26/05/2014

**Reporting Officers details:** 7028020

**Detailed report of events:**

[sch4] was traveling north along the eastern beach at low tide approximately 3-4 kms north of the Maheno when he observed a tall (over 6 foot) male adult at the waters edge with a bait bucket and a fishing rod pointed towards 2 dingoes within 4 metres of him (at the end of the rod).

[sch4] observation of the behaviour of the dingoes towards the man was enough to cause [sch4] to stop and return to assist him.

The larger male dingo was described as more aggressive towards the man than the second smaller dingo that would join in for a period then stand back and watch the larger dingo before periodically joining in again.

The behaviour of the large male dingo was described by [sch4] as very dominant towards the man, it's head down facing the man, teeth bared and hackles raised. It made attempts to lunge towards the man trying to get past the fishing rod. When asked if the dingo was dancing around he stated that it looked more serious than that.

[sch4] intervened by putting his vehicle between the dingoes and the fisherman, he yelled at the dingoes and attempted to herd them north away from the man. The dingoes were persistent in trying to return to the fisherman. The dingoes were intercepted approximately 4 times for approximately 20-30 metres before they retreated to the dunes.

[sch4] observed two vehicles further up the beach with a male, two women and children (approximately 60m). The man approached [sch4] door and [sch4] explained the situation warning him that these dingoes looked like they meant business. A woman who was with the group advised the fisherman was with them and thanked [sch4] for his assistance.

[sch4] left the scene and did not know if the dingoes returned.

**Additional comments and notes:** [sch4] is a long term resident of Fraser Island Orchid Beach area who has experience with Fraser Island dingoes and associated behaviours.

[sch4] reported this interaction to off duty ranger 7027518 who forwarded the information to 7026466 who then interviewed [sch4] over the phone.

Actions and interaction site are consistent with a known family pack in this area

**Action taken:** Interaction reported. 2IC Dundubara contacted and advised of situation and requested to patrol area between 15:00 and 16:00 from today and report any further activity in the area along with stepped up briefings.

**Proposed further action:** Continue patrols in this area and monitor behaviour. Briefing of all family groups in this area. Advise Cathedral Beach Resort of increased activity in their area and to advise their guests accordingly.

**Faxed/emailed date: 16 June 2014**

Comments **[sch4p3] was carrying a stick and was watching her children closely**

**Detailed report of events:** [sch4p3] was standing at the water's edge watching her two daughters ([redacted] yrs) swimming. Two dingoes ran past [sch4p3] toward the children in the water. The children backed into the water and [sch4p3] ran toward them with a piece of pvc and attempted to chase the dingoes away. As [sch4p3] attempted to chase the dingoes away the adult male bared his teeth and snarled at her. [sch4p3] managed to get to her youngest daughter but was unable to get to her other daughter while watching both dingoes. [sch4p3(3)] attention was split between the two dingoes each time she concentrated one dingo the other dingo would approach closer. GGPI13F got to within 1m of her oldest daughter who was thigh deep in the water.

At this point two men from the houses who had been alerted by the screams arrived and chased off the dingoes. The men then walked [sch4p3] and the children back to their house.

All people involved were quite shaken by the incident. Ranger 7027518 interviewed [sch4p3(3) Prejudice the protection of an individual's right to privacy] and [sch4p3(3) Prejudice the protection of an individual's right to privacy] at Eurong Ranger Station approx 2.00pm 2/7/14. These were the two men who intervened.

[sch4p3(3) Prejudice the protection of an individual's right to privacy] [sch4p3(3) Prejudice the protection of an individual's right to privacy] said that a woman was down on the beach with her two teenage daughters. One dingo ran at the group and the other went around the group and charged at full speed at one of the daughters who was in the water. This dingo was lunging at the girl and almost managed to grab her. Both girls were screaming and the mother had a stick trying to deter the dingoes but with no result. The two men ran down the beach and chased off the dingoes but they did not go very far. [sch4p3(3) Prejudice the protection of an individual's right to privacy]

[redacted] children were playing with a ball on the lawn and when one kicked the ball onto the long grass a dingo that was hidden in the grass stood up and grabbed the ball and ran off. He said it is very difficult to keep so many children within arms reach. [redacted]

[sch4p3(3) Prejudice the protection of an individual's right to privacy]

**Additional comments and notes:** GGPI13F was positively identified by [sch4p3] as a female dingo with a green tag with a strip of pink in the right ear, as she was being interviewed by 7027330 GGPI13F walked into the yard and [sch4p3] identified it as one of the dingoes involved.

The dingo was positively identified as GGPI13F by 7027330.

The owners of the residence were with [sch4p3] and were quite concerned with the behaviour of dingoes in the area and as they are fully booked till November they intend warning tenants about the dingoes. The owners have been coming to the island for [sch4p3] years and have had spikes in activity over that time but believe this is the worst behaviour they have witnessed and believe it is because the dingoes are being fed.

GGPI13F had been seen sleeping under the southern residence and walking up the stairs onto the verandah. The unidentified adult male may have been GBW11M the Alpha male of the Oaks pack who has a history of similar behaviour and is regularly seen in the area with the juveniles (now sub adults). At approx 3.00pm 2/7/14 at the direction of the RIC NRM, Ranger 7027518 travelled to the Oaks to interview the woman who had been involved in the incident.

On arrival GGPI13F was sitting on the front lawn as I approached it was clear she was not going to move from my path and I walked around her. She got up and started to walk behind me. I yelled at her and jumped forward at her. she retreated and sat down about 10 metres away. The woman and her daughters were not at the house. The next door neighbours said they had left a little while ago.

**Action taken:** Interview conducted, occupants of the residences briefed, patrolled area, report generated.

**Proposed further action:** Continue patrolling regime, monitoring of dingoes in the are.

**Faxed/mailed date:** 4/7/14

**Reporting Officers details:** 7027330

Comments <b>Viewed interaction</b>	

**Detailed report of events:** [sch4p3(3) Prejudice] and friends were at Eli Creek, they observed a single dingo running around and this dingo jumped into the back of a vehicle and stole a towel. [sch4p3(3)] took a photo of the dingo resting on the beach (photo attached) [sch4p3(3)] saw two female Asian tourists sitting on the beach, near the water with their backs to the dingo. From about 40 meters away this dingo ran towards them and stopped about a meter away. One of the ladies turned to face the dingo and the dingo lunged toward the second person and nipped her on the lower part of her back (possibly did not get body contact, probably clothing only). A vehicle approached, two people alighted from the vehicle and chased the dingo away. [sch4p3(3)] reported the incident to rangers 7027130 and 7027816 very late 31/7/14. Ranger 7027816 was able to download the photograph of the dingo involved and report was generated.

**Additional comments and notes:** This dingo was loitering around buses, tour groups and visitors for some time before this incident at Eli Creek. The interaction reported by the tour bus thru Corro QPWS East SFC on the 30/7 was also witnessed sometime prior to this interaction. Interaction reported to rangers at 1600 on 31/7/14. Ranger 7027518 received the report and High Resolution photograph 1/8/14. In consultation with Ranger 7026936 The high resolution photograph (attached) was compared with dingo profiles and it was determined that the dingo in the photograph is BRG 13M. Profile for BRG 13M attached. Note White tail tip. Low socks, angled right sock, left sock has tan blotch between toes (very distinctive). Rear left pads have no black pigmentation are all pink. Tag is Southern Style (button in inner ear) Stud and button base colours are both pink. BRG13M is frequently sighted at Eli Creek and has numerous interaction reports. Attached is a recent Code E from 28/6/14 at Eli Creek involving mouthing.

**Action taken:** Notified SR, Dingo Ranger Northern. Ranger 7027518 confirmed identification completed report and emailed.

**Proposed further action:** Increase patrolling Happy Valley to Maheno.

**Faxed/emailed date:** 1/8/14 **Reporting Officers details:** 7027816

Comments **The group had a bait bag unsecured at their vehicle.**

**Detailed report of events:** Ranger 7027146 received a phone call at Dundabara ranger base, from sch4p3( 3) Prejudice th who reported that his son sch4p3( 3) had been bitten by a dingo on the beach adjacent to Happy Valley.

Rangers 7028018 & 7028020 were notified of the interaction and met the father and son at Happy Valley to conduct a formal interview.

sch4p3( 3) Prejudice th and seven (7) other friends and family were collecting worms on the beach adjacent to Happy Valley at approx. 13:10.

Two dingoes described as a male and female (both tagged) moved towards the group from the south. The father stated that the two dingoes were wrestling with each other and larger male was nipping and acting dominant towards the female.

The female dingo approached the group (within a couple of meters) on her own, sniffing at the bait bag. The male dingo seeing the other dingo ran quickly and directly at the group. The female and the male dingo starting circling around the group. The group moved into the surf to avoid the two dingoes. The male dingo lunged three (3) times and made contact with sch4p3( 3) sch4p3( 3) Pr year old son who is 6 foot 11) right leg, biting him sch4p3( 3) was wearing jeans. No skin was broken).

sch4p3( 3) swung his bait bag at the dingoes to deter them but the two dingoes persisted herding them into the ocean. The group managed to exit the ocean with sch4p3( 3) swinging his bait bag and they made their way to their vehicle. The two dingoes directed their attention towards another bait bag full of fish frames near the groups vehicles. The two dingoes proceeded to eat the fish frames in the bag.

sch4p3( 3) threw his bait bag away in an attempt to deter the dingoes away from their vehicle and the two dingoes chased it.

The group got in their vehicles and waited for the dingoes to leave so they could retrieve the bait bag. The female dingo had her teeth stuck in the mesh of the bag, but managed to free it loose. Jami retrieved the bait bag and the group left the two dingoes and drove up to Happy Valley and reported the interaction.

**Additional comments and notes:** GGPI13f and BRG13m were positively identified and photographed by rangers 7028018 & 7028020 at 12:40 on the beachfront opposite the Oaks. The two dingoes were being encouraged by a visitor (Code C interaction completed and circulated). GGPI13f and BRG13m were heading north along the beach towards Happy Valley.

sch4p3( 3) Prejudice th said the larger male dingo (gender confirmed) that bit sch4p3( 3) had a tag in its left ear that looked green. Both GGPI13f and BRG13m have obvious green in their tags.

sch4p3( 3) supplied ranger 7028018 with a photo of the two dingoes (see attached photo 1) play wrestling, just prior to the interaction. The male dingoes sock marking are similar to BRG13m (see photo 2).

GBW11m was observed at approx. 11:30am just north of Happy Valley. GBW11m tag is delaminated and does show some green. Colouring and sock markings of the male dingo in the photo taken by sch4p3( 3) are not consistent with GBW11m.

BRG13m was observed by rangers 7028018 and 7028020 near fishermen just north of Happy Valley at

approx. 15:00. One of the fishermen approached the rangers and stated that the dingo was acting very confidently towards them.

**Action taken:** Interaction reported and a preliminary report circulated. Interview conducted and a detailed interaction report generated and circulated. RIC NRM notified.

**Proposed further action:** Continue regular ranger patrols between Poyungan and Eli Creek (3 times daily). Record all dingo observations. Brief all fishermen and people recreating on the beach on dingo safe behaviour.

**Faxed/emailed date:** 8/08/2014

**Reporting Officers details:** 7028018 & 7028020

## Photos

### Photo 1.

**Description:** sch4p3 sch4p3(3) P took the photo on the 8/08/2014. The photo was taken just prior to being herded into the ocean opposite Happy Valley. Male dingo on the right and female on the left, Both are tagged.

### Photo 2.

**Description:** Photograph of BRG13m sock markings taken from his profile records.

Comments **1<sup>st</sup> time visitor, part of a large group**

**Detailed report of events:** Whilst on patrol on 11/08/2014 rangers 7028018 and 7028020 stopped to brief a group of fishermen and were advised of an interaction that occurred on Saturday 09 August.

[sch4p3( 3) Prejud] was standing on the beach in front of Happy Valley watching some fishermen. He observed a dingo approach and allowed the dingo to get close. The dingo came around behind him and mouthed him on the back of the left leg. [sch4p3] was wearing jeans and there was no mark on his skin.

[sch4p3( commented that the dingo was tagged but was unable to say which ear the tag was in and whether the dingo was male or female, but did state that he thought it "looked male".

The dingo left of his own accord and continued along the beach.

**Additional comments and notes:** [sch4p3] did not do anything to deter the dingo from approaching.

**Action taken:** Interview conducted, RIC NRM & RIC SMU notified, fishermen briefed, patrol continued.

**Proposed further action:** Continue patrols, including extra patrols between Happy valley & Eli Creek. Continue briefings of campers and fishermen. Continue closure of campground between Poyungan Rocks and Eli Creek. Continue monitoring of behaviour of known pack.

**Faxed/mailed date:** 12/08/2014

**Reporting Officers details:** 7028020

<b>Questionnaire:</b>	Specify visitor type <b>Accommodation guest</b>
Did they receive an information pack with their permits	<b>Yes</b>
Did they read the Dingo Brochure	<b>Yes</b>
Did the people follow 'dingo safe' messaging? (Ranger to assess)	<b>Yes</b>
Comments	<b>[sch4p3( and [sch4p3] followed dingo safe messaging by not jogging alone and when approached by the dingoes they stood back to back while attempting to deter the dingoes.</b>

**Detailed report of events:**

Ranger 7026936 was initially informed of interaction at 0700 by Yidney Rocks apartment managers.

[sch4p3( and [sch4] were interviewed together at 0730 by ranger 7026936, the following is an account of the dingo interaction.

At 0645 on the 26/10/2014, two ladies [sch4p3( 3) Prejudice] were jogging north along the beach 50m south of the Oaks. The ladies noticed that two dingoes were running along the beach parallel with them 30m towards the dunes. They stopped jogging when they saw the dingoes, which then began approaching [sch4p3( 3) Prejudice]. As the dingoes approached within 5m, the two ladies stood back to back and tried to make themselves look tall whilst attempting to keep calm.

The two dingoes began circling the ladies whilst they stood back to back. The dingo with a red tag in its left ear began to growl whilst circling. The two ladies started to yell for help. This continued for approximately two minutes until the red tagged dingo began lunging at [sch4p3( 3) Prejudice] from behind whilst they were distracted by the untagged dingo in front of them. The two dingoes continued to circle, while the red tagged dingo lunged at both [sch4p3( 3) Prejudice] and eventually bit [sch4p3( once on her left thigh and twice on her right knee/thigh (see photo's below). The red tagged dingo also bit [ ] on her left calf, however did not break the skin (see photo's below). Whilst this was occurring the ladies were screaming out for help. [sch4] kicked the red tagged dingo in the head on two occasions which made the dingo momentarily back away, before continuing to growl, circle and attempt to bite the two ladies.

The interaction occurred for approximately five minutes until a witness staying in accommodation at the Oaks noticed what was occurring. [sch4p3( 3) Prejudice] drove his white dual cab straight towards the dingoes as they were circling [sch4p3( 3) Prejudice]. Once [ ] was within 20m the two dingoes ran off. [sch4p3( 3) Prejudice] then entered the dual cab and asked [ ] to drive them back to their accommodation at Yidney Rocks.

[sch4p3( 3) Prejudice] and his wife [ ] were interviewed, however could not offer any further information to what was provided by [sch4p3( 3) Prejudice]. Both [ ] were able to confirm that one of the dingoes involved had a red tag in its left ear and that the other dingo was an untagged female.

[ ] began receiving medical treatment by local ambulance officer at 0730 who shortly after transported her to receive further medical treatment at the Hervey Bay hospital.

**Additional comments and notes:**

Over the last two months there have been three threatening dingo interactions between Poyungan rocks and Eli creek involving BWR13m and an untagged female together. There are three trail cameras that are currently in use within the area between Eli Creek and Poyungan Rocks. These cameras have only recorded two dingoes since September 2014, BWR13m and an untagged female. Both dingoes have regularly been recorded at each of these sites together.

[sch4p3( 3) Prejudice] has been shown some photographs of a dingo suspected to be involved in this interaction (BWR13M) and has confirmed that the dingo that attacked them had an identical tag to the dingo in the photos [sch4p] was unable to confirm identity of second untagged female dingo.

Interrogation of the ear tag register was carried out. Dingoes were eliminated from this search that did not have:

- red in their tag,
- a tag with red base colour including button colour
- button location on inside of ear (dingoes tagged south of Indian Head are tagged this way)

This search resulted in three dingoes matching this criteria:

- RYR08m, Tagged at Eurong. Last recorded observation was February 2010 at Eurong
- YRY08m, Tagged at Dundubara. Last recorded observation was Eli Creek July 2011.
- BWR13m, Tagged in One Tree Rocks camp zone. Multiple current observations between Poyungan Rocks and Eli Creek, between 3 September 2014 and 27 October 2014.

A detailed management history of BWR13m has been compiled and attached to this report.

**Action taken:** QPWS management notified. Interview of [sch4p3( 3) Prej] and witness conducted. Additional dingo safe briefings targeted in area and area's adjacent to interaction. Campground closures implemented between Poyungan rocks and Eli creek. Happy Valley and Yidney Rocks accommodation managers notified.

**Proposed further action:** Continue to educate visitors in area with regard to dingo safety

**Faxed/emailed date:** 26/10/14
