R.S.2

N O T I C E

An applicant for a license under the Water Act, 1926-1968 must forward with the application satisfactory evidence that he or she is the owner or legal occupier of the land in respect of which the application is being made.

The Commissioner will accept as satisfactory evidence any of the following:-

(1) A certificate from a Solicitor or Bank Manager, on the form provided or the like, that he has sighted the Instrument of Title or Crown Lease giving the information requested in the form; OR

(2) A Statutory Declaration by the applicant himself on the form provided; OR

(3) A Statement by a Solicitor or other competent person that the applicant is in legal occupancy by virtue of an Agreement or Lease, accompanied by a copy of such document, together with a description of the land with the number, volume and folio (or details of Crown Lease) and the name of the registered proprietor of the land, or part of the land, which is being occupied.

A form of certificate by a Solicitor or Bank Manager and a Statutory Declaration appear on the reverse side of this Notice. Please note that only one of these is required and not both. The certificate under (1) is preferred by the Commissioner and should be more convenient to the applicant, however where such a Certificate is not convenient, the personal Declaration should be made in its place.

6m East Dam

RE: WATERWORKS LICENSE APPLICATION NO.'S 30970, 30971 & 30972

UTAH DEVELOPMENT CO. - SARAJI MINE - DYSART

diversion channels

A general inspection was made of the mines with emphasis on sand and gravel removals and the above applications. Most of the existing storages and diversion channels were also inspected. There appeared to be no problems although the Peak Downs mine area consists of very dispersable soils which results in erosion in the diversion channels. A close eye is usually kept on this and any serious erosion is corrected almost immediately.

As can be realized, hazard potential in that area is non existant due to the location. The only storages that could present a problem are the sludge ponds. If these broke I guess the creeks would become poluted.

In general all the dams and diversion channels are designed by competent engineers and are constructed properly. I therefore recommend that the above licenses be issued as applied for.

(3) ch. Des. Com attention Mr Hoffie
one of these is a 6m earth dam for a sludge pond.
The application are for existing works and have been outstanding for ~~years~~
There is no hazard in the area
